RE-PROOFING THE LOWER WING PANEL ROUNDED SECTION TO ACCOMMODATE SNOW CHAINS

Basic Manual :

M.R. 306

The radius of the wing panel rounded section (pillar lining) has been increased to allow the fitting of snow chains. Therefore, on an older vehicle, for partial replacement of this component when cutting the middle of the rounded section, it will be necessary to adjust the shape of the edging of the part supplied by the Parts Department (see method described in the technical note).

The repair methods given by the manufacturer in this document are based on the technical specifications current when it was prepared.

The methods may be modified as a result of changes by the manufacturer in the production of the various component units and accessories from which his vehicles are constructed".
