Repair Manual for
"SRP Air bags"

REMINDER:

The new computers for the "Air bags/Pretensioners" on vehicles equipped with the "SRP" system without side air bags, are supplied configured with driver and passenger air bags.

If the vehicle is only equipped with pretensioners and a driver's air bag or only with pretensioners, the computer configuration will have to be changed.

Changing the configuration (new command modes)

Using the XR25 (fiche n° 49):

- 1) To configure the computer with driver's air bag but without passenger air bag, enter command mode **G85*5*** (bargraph 17 LH side should extinguish after the ignition is switched off then on again, bargraphs 18 and 19 LH side remain illuminated).
- 2) To reconfigure the computer with driver's and passenger air bags , enter command mode **G85*6*** (bargraph 17 LH side should illuminate after the ignition is switched off then on again, bargraphs 18 and 19 LH side remain illuminated).
- 3) To configure the computer with pretensioners only, enter command mode **G85*7*** (bargraphs 17 and 19 LH side extinguish after the ignition is switched off then on again, bargraph 18 LH side remains illuminated).

In the event of the computer configuration not corresponding to the vehicle equipment, the air bag warning light remains illuminated.

"The repair methods given by the manufacturer in this document are based on the technical specifications current when it was prepared.

The methods may be modified as a result of changes introduced by the manufacturer in the production of the various component units and accessories from which his vehicles are constructed."
