Basic manual :

M.R.

### SAFETY

It is **PROHIBITED** to carry out work on a vehicle equipped with side air bags without first disconnecting the vehicle battery or deactivating the computer using the fault finding tool.

This safety measure is to be applied if any work is carried out requiring:

the removal of front seats fitted with side air bags.

When working on the seatback of a seat equipped with an air bag and **IN ORDER TO ENSURE** that the air bag will inflate properly:

#### IT IS ESSENTIAL TO OBSERVE THE FOLLOWING INSTRUCTIONS:

- The position and number of clips to be used.
- Use the same type of clips as was used for series production, Part No. 77 01 047 751.
- Special pliers are used to crimp these clips Part No. 00 00 152 100.

When fitting clips to the straps, the "pig's snout" clips must not perforate the straps: they should surround them

**REMINDER:** when an air bag module is triggered, the deformation and damage to the mountings mean that the seat frame must be replaced.

After refitting the seat, test the air bag using the fault finding tool.

"The repair methods given by the manufacturer in this document are based on the technical specifications current when it was prepared.

The methods may be modified as a result of changes by the manufacturer in the production of the various component units and accessories from which his vehicles are constructed".
