ON-BOARD TELEMATICS SYSTEM

General Information	83C-1
Security code	83C-6
Enter security code	83C-7
Parameters	83C-9
Calibration	83C-10
Updates	83C-11
System menus	83C-12
Connections	83C-15
Display connections	83C-17
Connections for the steering wheel control	83C-18
Aerial	83C-20
CD changer	83C-21
Customer complaints	83C-24
Self-test procedure	83C-26
Fault finding chart	83C-27
CD ROM	83C-47

SYSTEM DESCRIPTION

- 1 External temperature signal (UCH or temperature sensor)
- 2 Remote display
- 3 Steering wheel controls
- 4 CD changer (dashboard or boot)
- 5 Lighting signal (dashboard-mounted changer only)
- 6 Speaker outputs
- 7 Vehicle feeds (+ before ignition/+ accessories/earth/radio mute/speed signal/aerial supply)
- 8 Radio navigation system
- 9 Satellite reception aerial
- 10 Radio aerial
- 11 Vehicle multiplex connection (reversing signal/vehicle type/+ after ignition).
- 12 Vehicle feeds (+ before ignition/+ accessories/earth/lights)

ON-BOARD TELEMATICS SYSTEM

Entry level navigation system: General Information

83C

The **Entry Level** navigation system is composed of:

- the radio-navigation system used for reading the CD-ROM, navigation CDs and radio,
- a single display.

The system will operate for approximately **20 minutes** without **+ accessories** feed. The radio-navigation system emits a beep and then switches off.

FUNCTIONS PROVIDED BY THE SYSTEM

- listening to the radio (four geographical zones can be programmed),
- displaying the name of the station (**RDS**), via the best transmitter (**AF** function),
- receiving traffic news (**I Traffic** function),
- receiving news flashes and emergency bulletins (**I News** function),
- receiving public safety warning announcements (**PTY 31**),
- playing compact discs,
- controlling a CD changer,
- guiding the vehicle by means of voice messages and symbols on the display screen,
- displaying **traffic information** messages (depending on version).

RADIO FUNCTION DETAILS

Radio

The tuner has three selection modes displayed on the screen and accessed via the radio-navigation front panel:

- manual mode (Manu),
- preset mode (Preset),
- alphabetical mode (List).

Compact Disc player

The CD player can play conventional compact discs and any audio tracks on a CD-ROM. CDs can be played in order or tracks can be chosen at random.

To listen to a Compact Disc during navigation guidance:

- insert the navigation CD-ROM,
- select guidance,
- wait for the end of the journey calculation (hourglass on display disappears),
- eject the CD-ROM and insert the compact disc.

Note:

If the route is modified while a Compact Disc is being played, it may be necessary to reinsert the CD-ROM.

CD changer control

A CD changer may be connected to the radio-navigation system. In that case, it may be necessary to enter a security code. See **Coded Protection** section.

A CD changer must be fitted with the radio-navigation unit disconnected.

The presence of the CD changer is detected automatically when the radio-navigation system is reconnected and the source is then accessible.

Thermal protection

If the temperature of the system is too high for it to operate properly, the volume is automatically reduced (without changing the volume on the display).

Should one of the tracks short circuit, the amplifier is automatically switched off.

Volume control

When the radio-navigation equipment is switched on, the volume is the same as when it was switched off, with a maximum volume of 15.

Note:

- the **mute** function stops the CD playing,
- **Traffic info** messages are played at the current volume setting. If the volume is altered during a message, the setting is stored until it is reset.
- **Navigation** messages are played at volume 7. If the volume is altered (between 0 and 10) during a message, the volume setting is stored.
- the amplifier is fitted with thermal protection which lowers the volume if the system overheats.
- if the tracks short circuit, the amplifier is automatically switched off.

The volume can be corrected as a function of vehicle speed. Select the desired volume change rate via the **Expert** mode: SPEED 5 for maximum change, 0 for no change.

NAVIGATION FUNCTION DETAILS

This navigation aid system uses a voice synthesiser and a radio-navigation display to guide the user of the vehicle.

This system allows:

- a specific location to be found, such as:
 - a road, street or avenue, etc.,
 - a hotel,
 - public services,
 - a garage or petrol station,
 - etc.
- select guidance modes in order to:
 - optimise journey time,
 - by selecting main or secondary roads, etc.
- display the distance and journey time.

CD-ROM special notes

The navigation CD-ROM includes:

- cartographic maps,
- voice messages in 12 languages,
- an operating update (depending on the version of CD-ROM).

Note:

The system may operate slightly differently after a new CD-ROM has been loaded. It is possible to find out the version of the CD-ROM by pressing the following keys: **Settings**, **Menu**, and **OK**.

Simulation mode

The system is equipped with a demonstration mode. Press the following keys: **Settings**, **Menu**, and **OK**, then select **DEMO**.

IMPORTANT

Demonstration mode must be deactivated to allow the system to operate normally. Every time the ignition is switched off, demonstration mode is deactivated.

Note:

- If the vehicle has been transported by train or ferry, the navigation system may need a few minutes to find its exact location (see **CALIBRATION**).
- If the vehicle battery has been disconnected, the system may need up to **20 minutes** to calculate its exact location. The vehicle must therefore be outdoors (with the navigation system in operation in order to pick up satellite signals with the satellite aerial).
- The system can also operate without valid satellite data. Under these circumstances, there may be a loss of precision in pinpointing exact locations.

ON-BOARD TELEMATICS SYSTEM

Entry level navigation system: General Information

83C

The table below lists the compatibility for all the map CD versions according to the radio-navigation part numbers in the Renault range.

Vehicles	Radio-navigation unit part number	MAP CD-ROM	
		SH 1	SH 3
Clio II:	82 00 170 236	COMPATIBLE	NOT COMPATIBLE
Mégane II	82 00 097 398		
Mégane II	82 00 485 487		
Master ph2	82 00 178 157		
Kangoo ph2	82 00 178 157		
Laguna II ph1	82 00 249 262		
Espace IV	82 00 300 852		
Espace IV	82 00 300 853		
Espace IV	82 00 300 854		
Modus	82 00 097 398		
Modus	82 00 335 144		
Modus	82 00 357 390		
Laguna II ph2	82 00 292 332	NOT COMPATIBLE	COMPATIBLE
Clio III	82 00 394 086		
Clio III	82 00 419 008		
Mégane II	82 00 419 008		
Modus	82 00 419 008		
Modus	82 00 419 010		
Modus	82 00 419 011		
Espace IV	82 00 408 759		
Espace IV	82 00 484 424		
Espace IV	82 00 484 426		
Espace IV	82 00 484 428		
Kangoo ph2	82 00 490 632		
Master ph2	82 00 490 632		

Compatibility between SH1/SH3 and the different map CD part numbers:

SH 1	
A-2002	82 00 180 162
B-2002	82 00 309 356
A-2003	82 00 299 536
B25	82 00 517 903

SH 3	
A-25	82 00 411 705
A-25-2	82 00 485 478
A-25-3	82 00 517 892
	82 00 517 895
	82 00 517 896
	82 00 517 898
	82 00 517 899

Two system components are protected by a code:

- the first **4-figure security code** is linked to the radio-navigation system. The user is asked for this code every time the power is cut. This code must be entered via the control satellite. The display shows **CODE** then **0000**.

IMPORTANT

if an incorrect code is entered, the radio-navigation system beeps, displays **CODE** and locks:

- 1st error: 1 minute,
- 2nd error: 2 minutes,
- 3rd error: 4 minutes... (32 minutes maximum)

When the code has been entered, certain parameters must be reprogrammed. Other parameters are only required when the code is entered for the first time (see the **Configurations** section).

Note:

The radio-navigation equipment will operate for approximately **2 minutes** without the code having been entered (with regular warning beeps).

- the **code which is exchanged between the CD changer (front panel) and the radio-navigation system**.

When replacing a new CD changer and a new radio-navigation system:

- Enter the required code(s).

When only replacing the radio-navigation system:

- Enter:
 - 1 the new radio-navigation code,
 - 2 the CD code (code from the former radio-navigation system which was previously connected to the changer).

When only replacing the CD changer:

- 1 If the CD changer is new, the system code is programmed automatically.
 - 2 If the changer has already been connected to a navigation system:
- Type in the CD code (code from the former radio-navigation system which was previously connected to the changer).
- If the code of the previous radio-navigation unit is lost, the connection code can be cleared with a clearing code. The clearing code is transmitted in the usual manner.

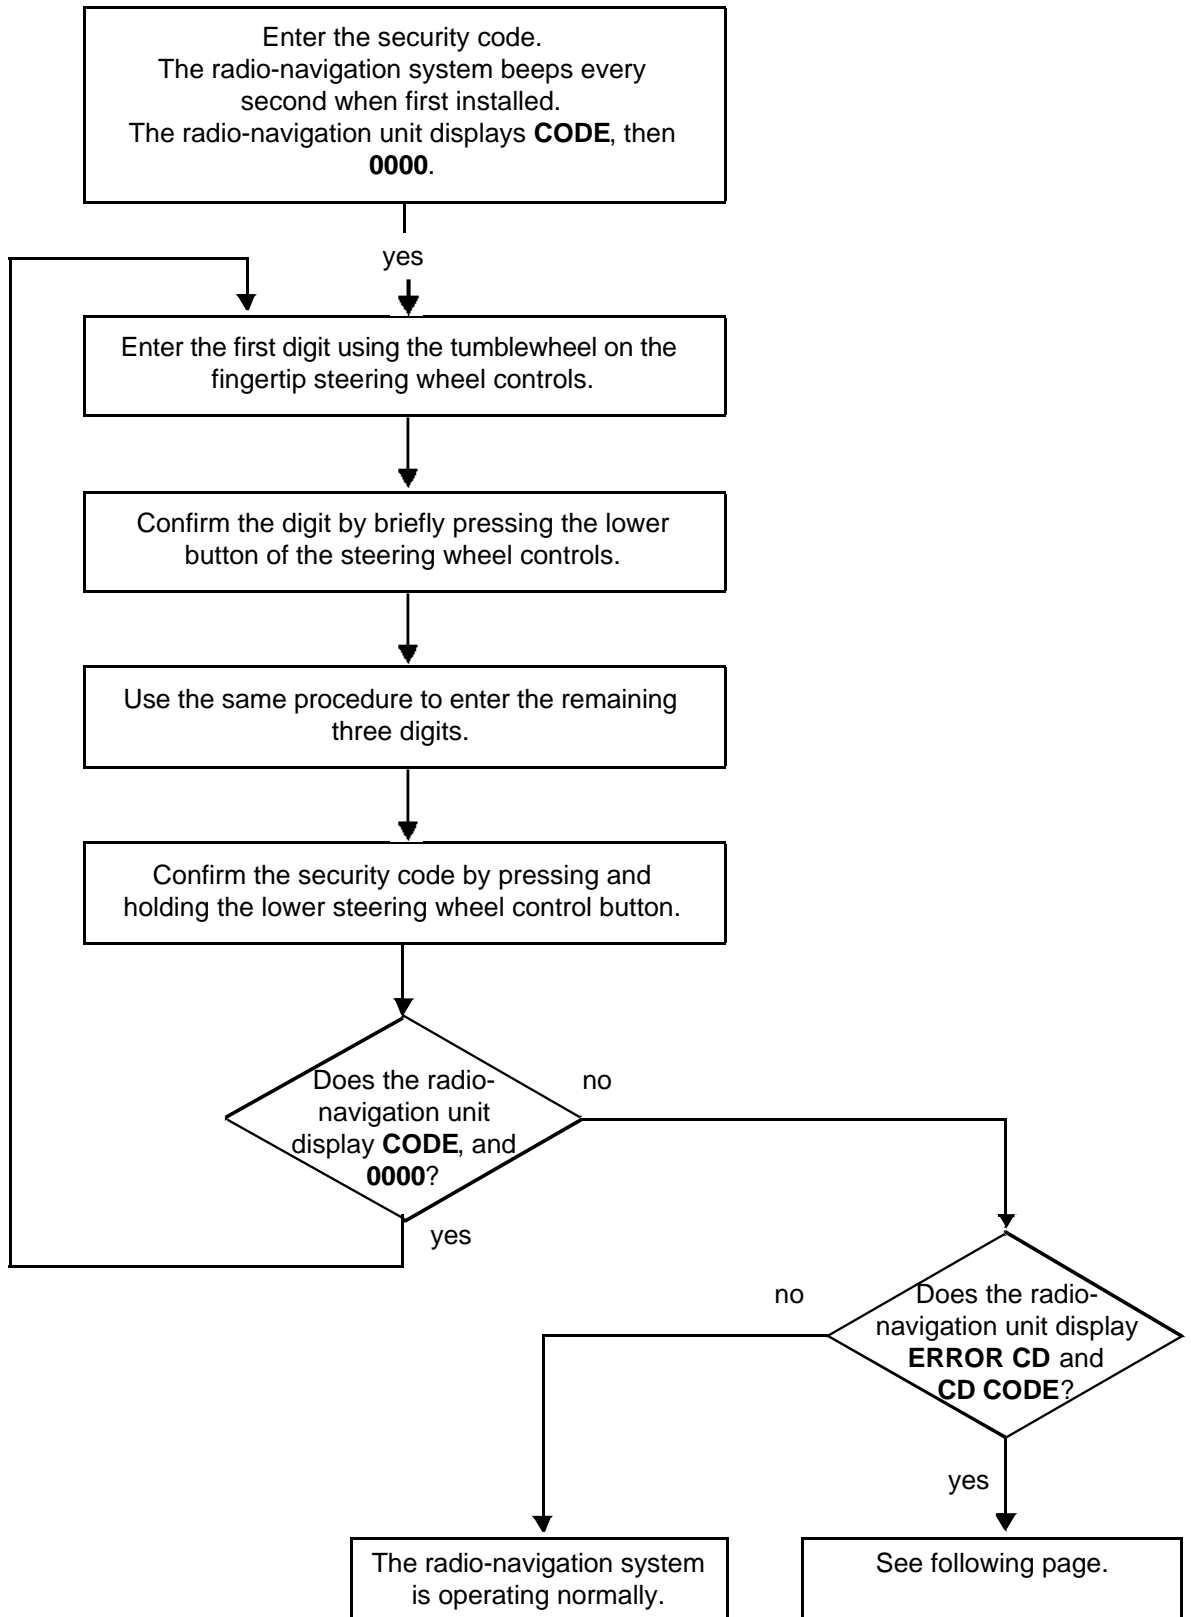

IMPORTANT

Only dash-mounted CD changers have codes. Boot-mounted changers are not coded.

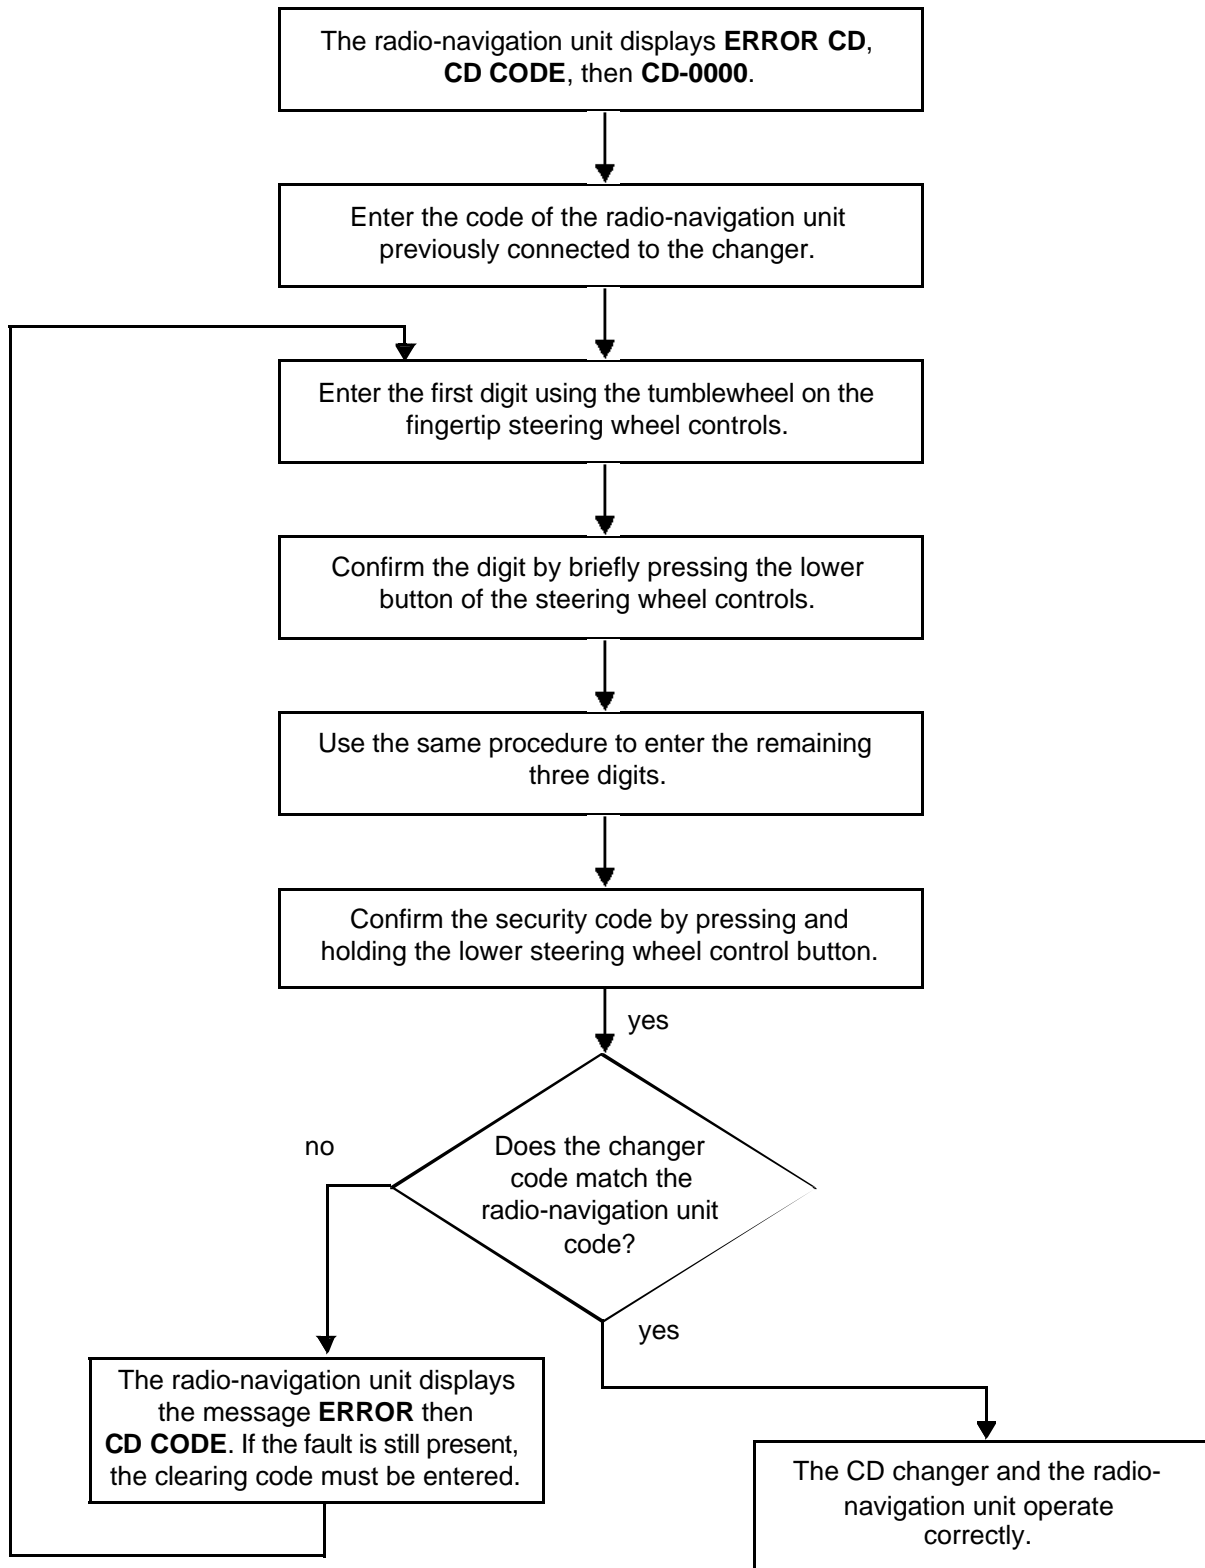

Note:

The radio-navigation system only starts a code exchanging operation with the changer after power supply has been cut.

THE DISPLAY SHOWS 'CODE' OR '0000'

THE DISPLAY SHOWS "CD CODE"

ON-BOARD TELEMATICS SYSTEM

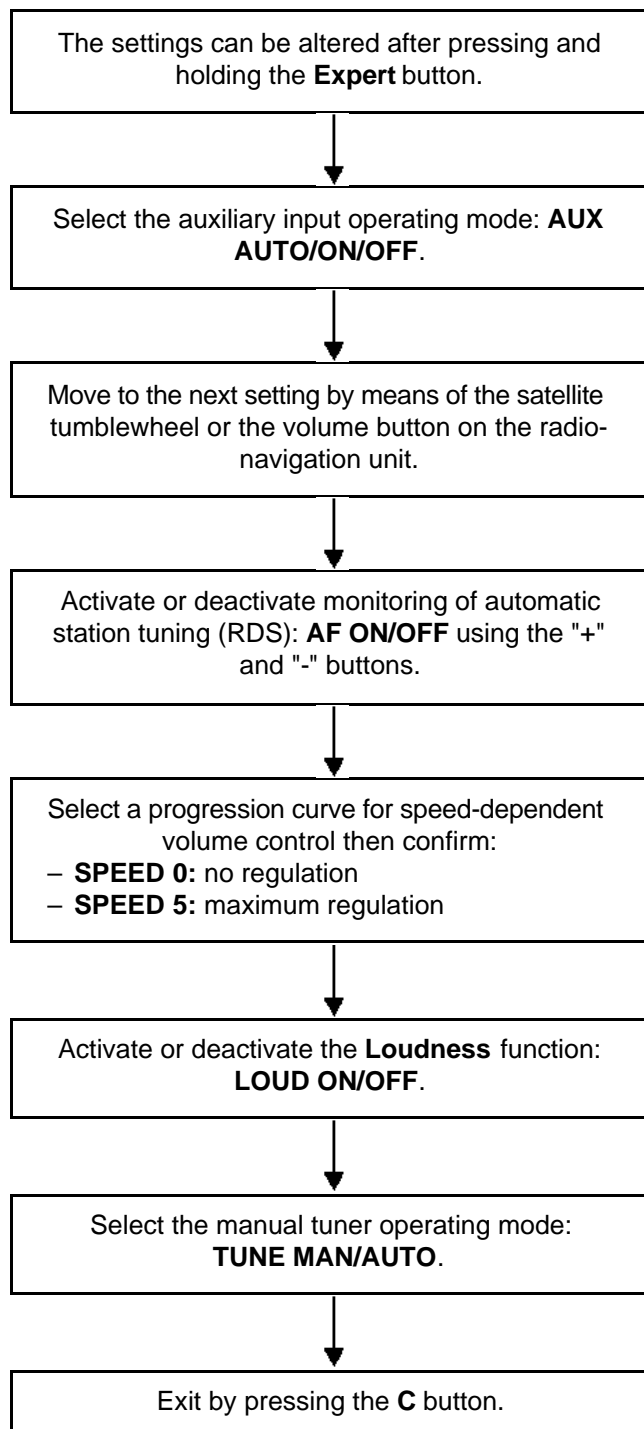

Entry level navigation system: Settings

83C

The radio-navigation system parameters are only requested the first time the security code is entered. They are then stored if the power supply is cut off.

- function activation **AUX** (Auxiliary)
- mode activation **AF** (automatic station tuning: RDS)
- alter the **rate** of **volume change** as a function of vehicle speed (5 for maximum change, 0 for no change)
- mode activation **Loudness**
- mode activation **Manual or automatic tuner**

SETTINGS

ON-BOARD TELEMATICS SYSTEM

Entry level navigation system: Calibration

83C

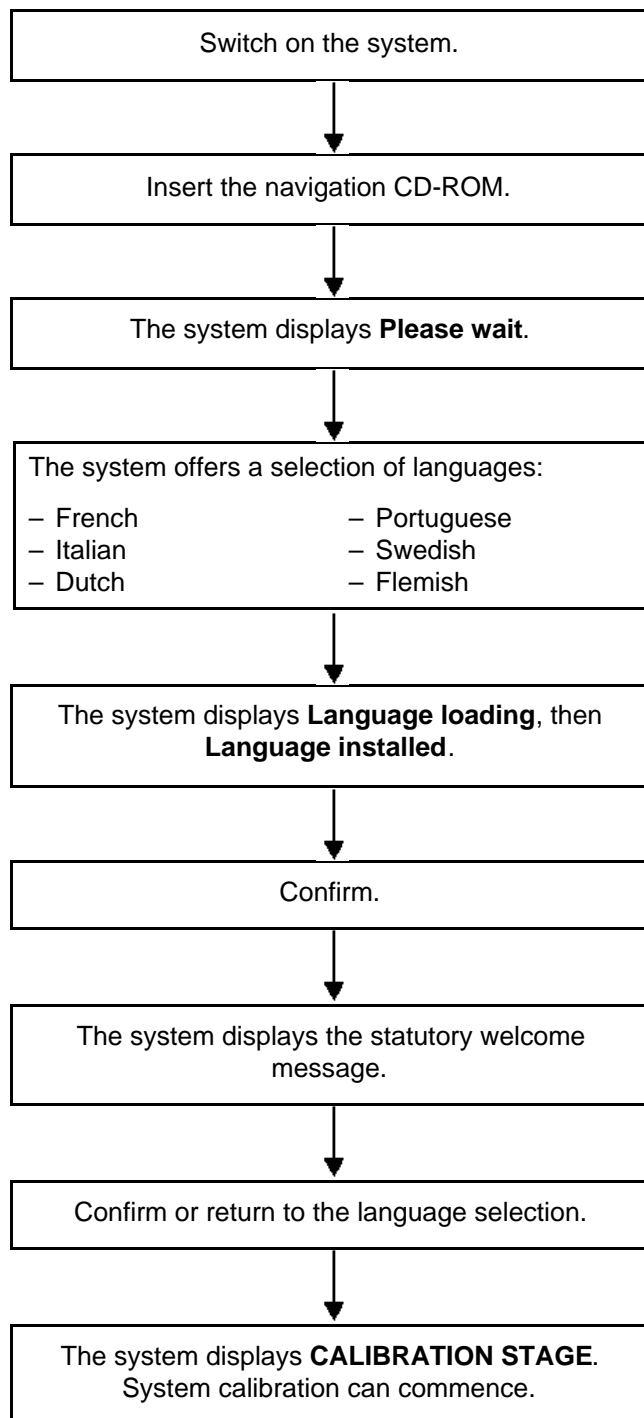

When the radio-navigation unit is installed, the system must be calibrated.

If calibration is not carried out, the system can be used in radio mode but the navigation mode is inoperative.

Note:

- The time cannot be adjusted if the system is not calibrated.
- If the vehicle has been transported by train or ferry, the navigation system may need a few minutes to find its exact location (see **CALIBRATION**).
- If the vehicle battery has been disconnected, the system may need up to 20 minutes to calculate its exact location. The vehicle must therefore be outdoors (with the navigation system in operation in order to pick up satellite signals with the satellite aerial).
- The system can also operate without valid satellite data. Under these circumstances, there may be a loss of precision in pinpointing exact locations.

CALIBRATION

ON-BOARD TELEMATICS SYSTEM

Entry level navigation system: Update

83C

Note:
Inserting a new CD ROM can release an update from the Carminat system software.
Follow the instructions below.

WARNING

Do not switch off the vehicle's ignition during the update.

Do not switch off the Carminat device during the operation.

Do not launch an update when driving.

USE

Switch on the Carminat device.

Check that the player does not contain a CD ROM.

Insert one of the two new Carminat CD ROMs. After a short time, choose **Run update?** using the right-hand rotary selector or pressing the NAV button.

The update starts. The dash buttons are backlit.

Wait **5 to 15 minutes**. During this operation the device is not in service. **Do not turn the device off during update.**

Note:
If the update is interrupted by the CD ROM being ejected or by the radio-navigation unit's power supply being cut, it will resume its process after the reinsertion of the CD ROM or re-establishment of the power supply, without screen display. Only the dash buttons are backlit. When these lights go out, the update has finished.

IMPORTANT

Certain configurations are irreversible. In the self-test procedure menu (press NAV to access the menu **SETTING** and **OK**, then by simultaneously pressing **FLAG/MENU/OK**.

When the device switches itself off and the time is displayed, then the update has finished.

Switch on the device.

- The radio function is activated.
- The new navigation software loads for **30 seconds**).

Press the "NAV" button to activate the navigation function.

Observe the safety instructions.

Press **OK** to confirm the setting.

- Has the update finished? The system is usable.

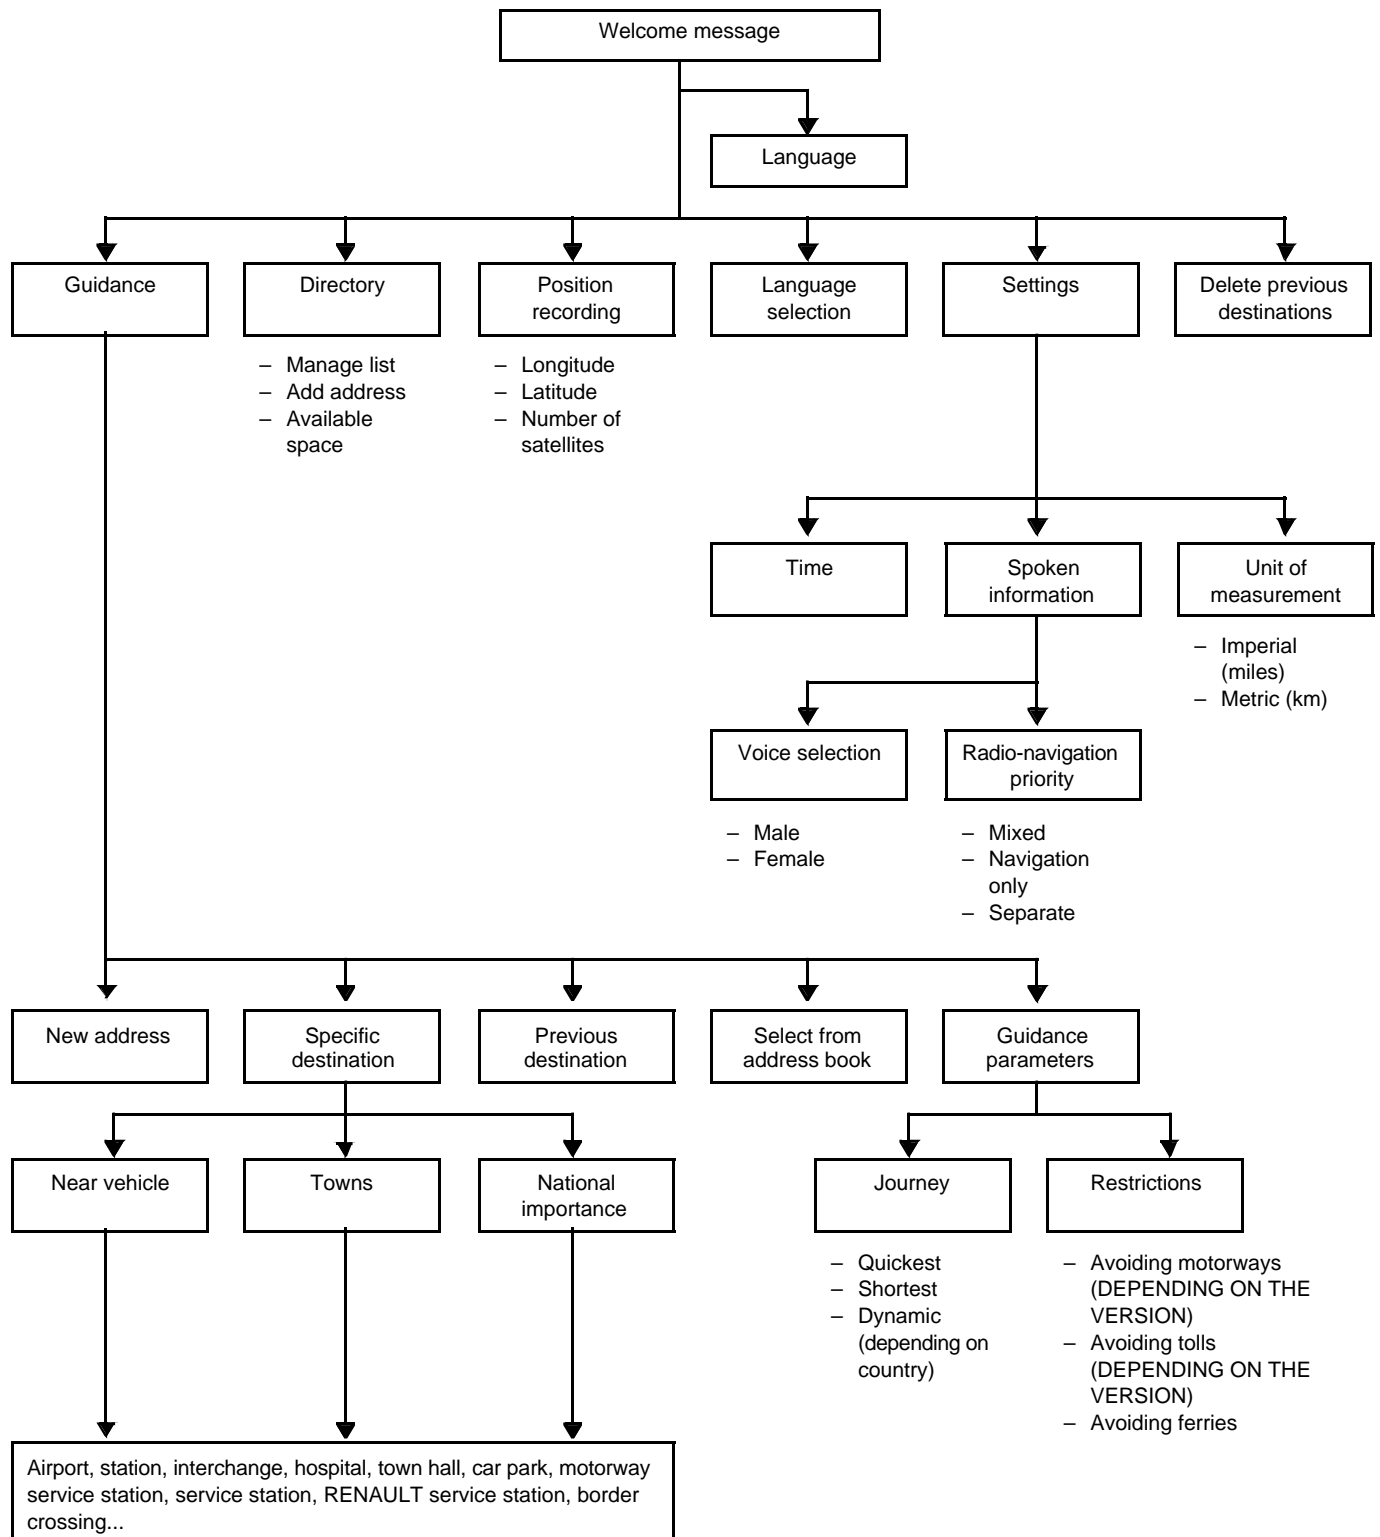

IMPORTANT

Guidance restrictions (**avoiding motorway** and **avoiding tolls**) are no longer available using the Bercker B25 map CD update on previous radionavigation systems (SH1), but it is still available on the new radionavigation systems (SH3).

ON-BOARD TELEMATICS SYSTEM

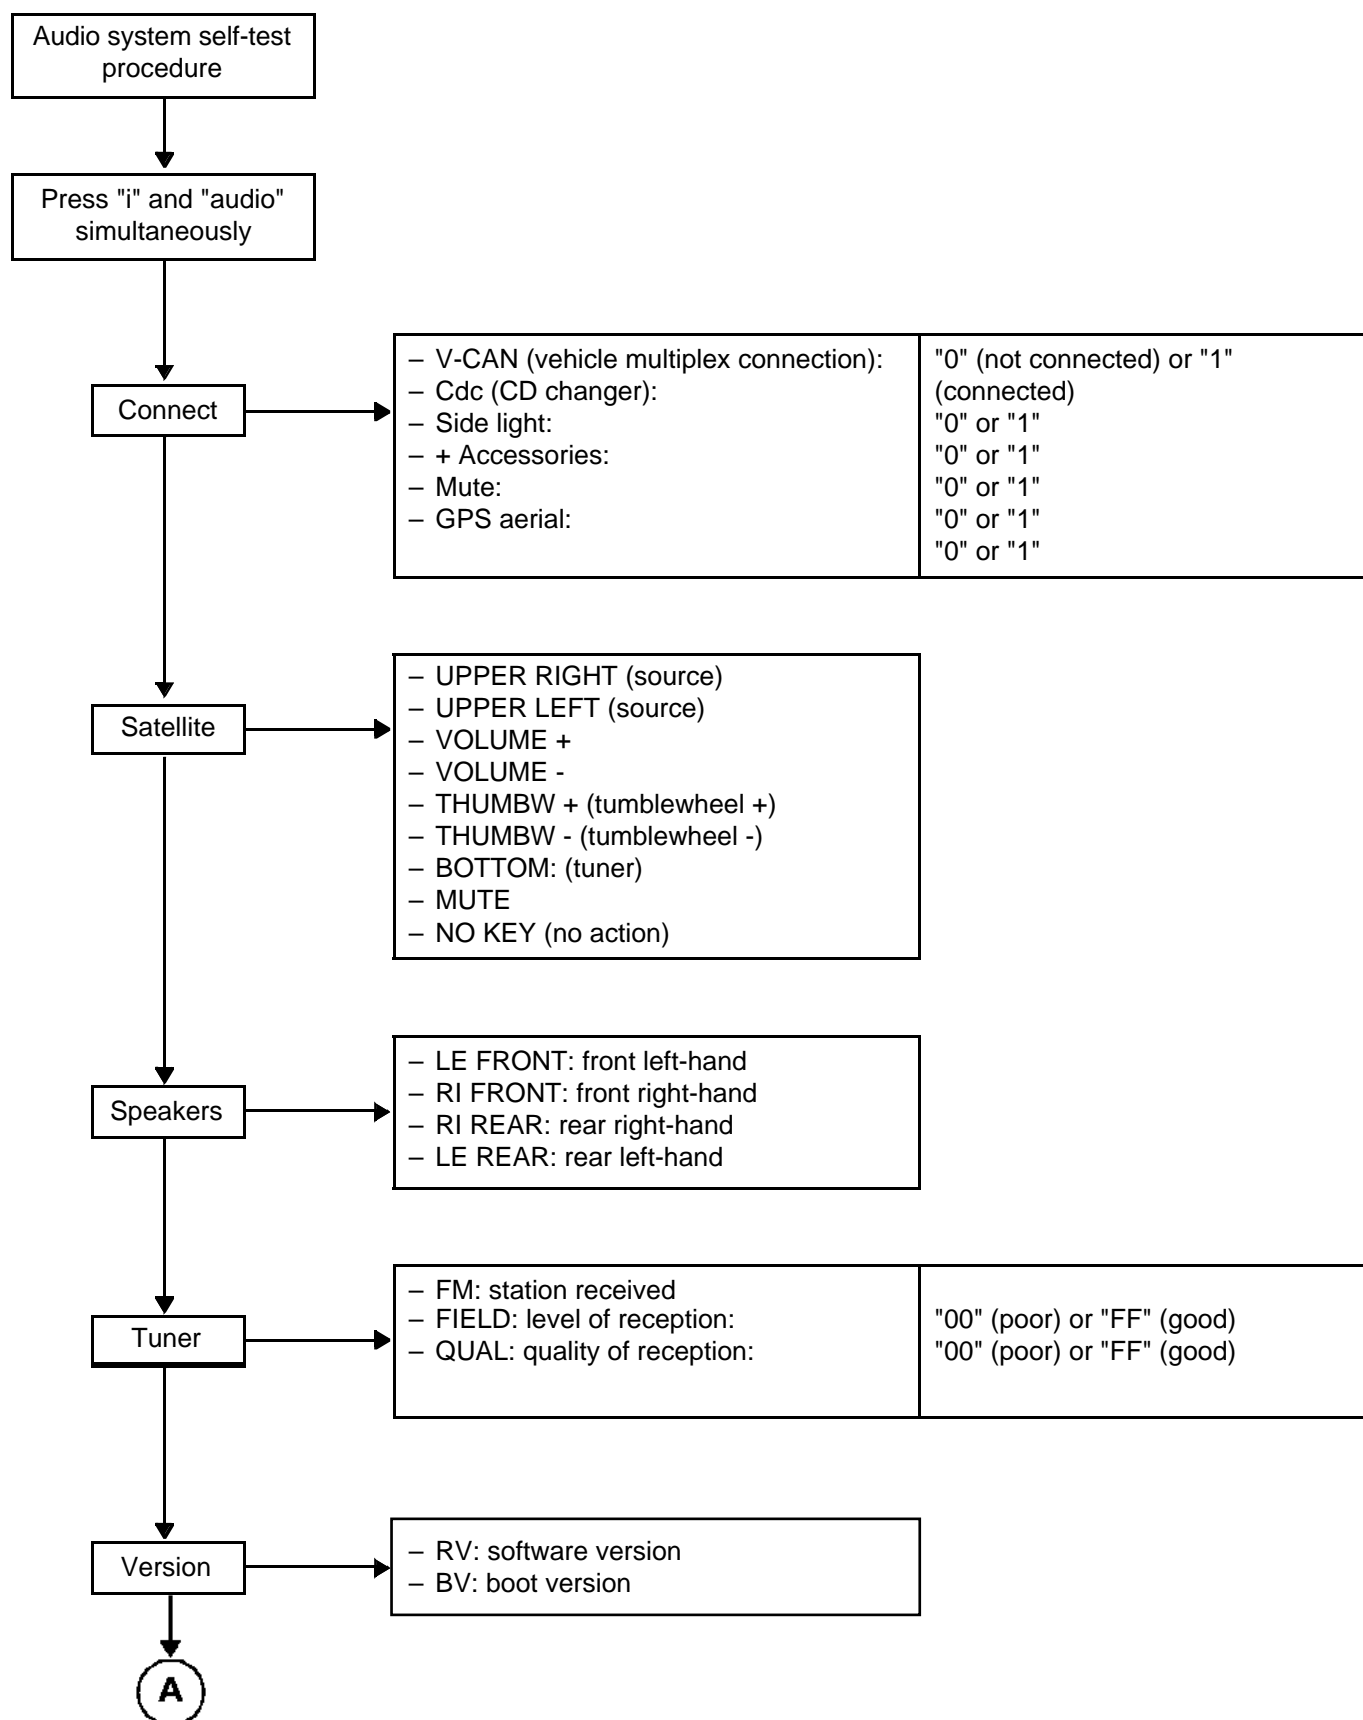

Entry level navigation system: System menus

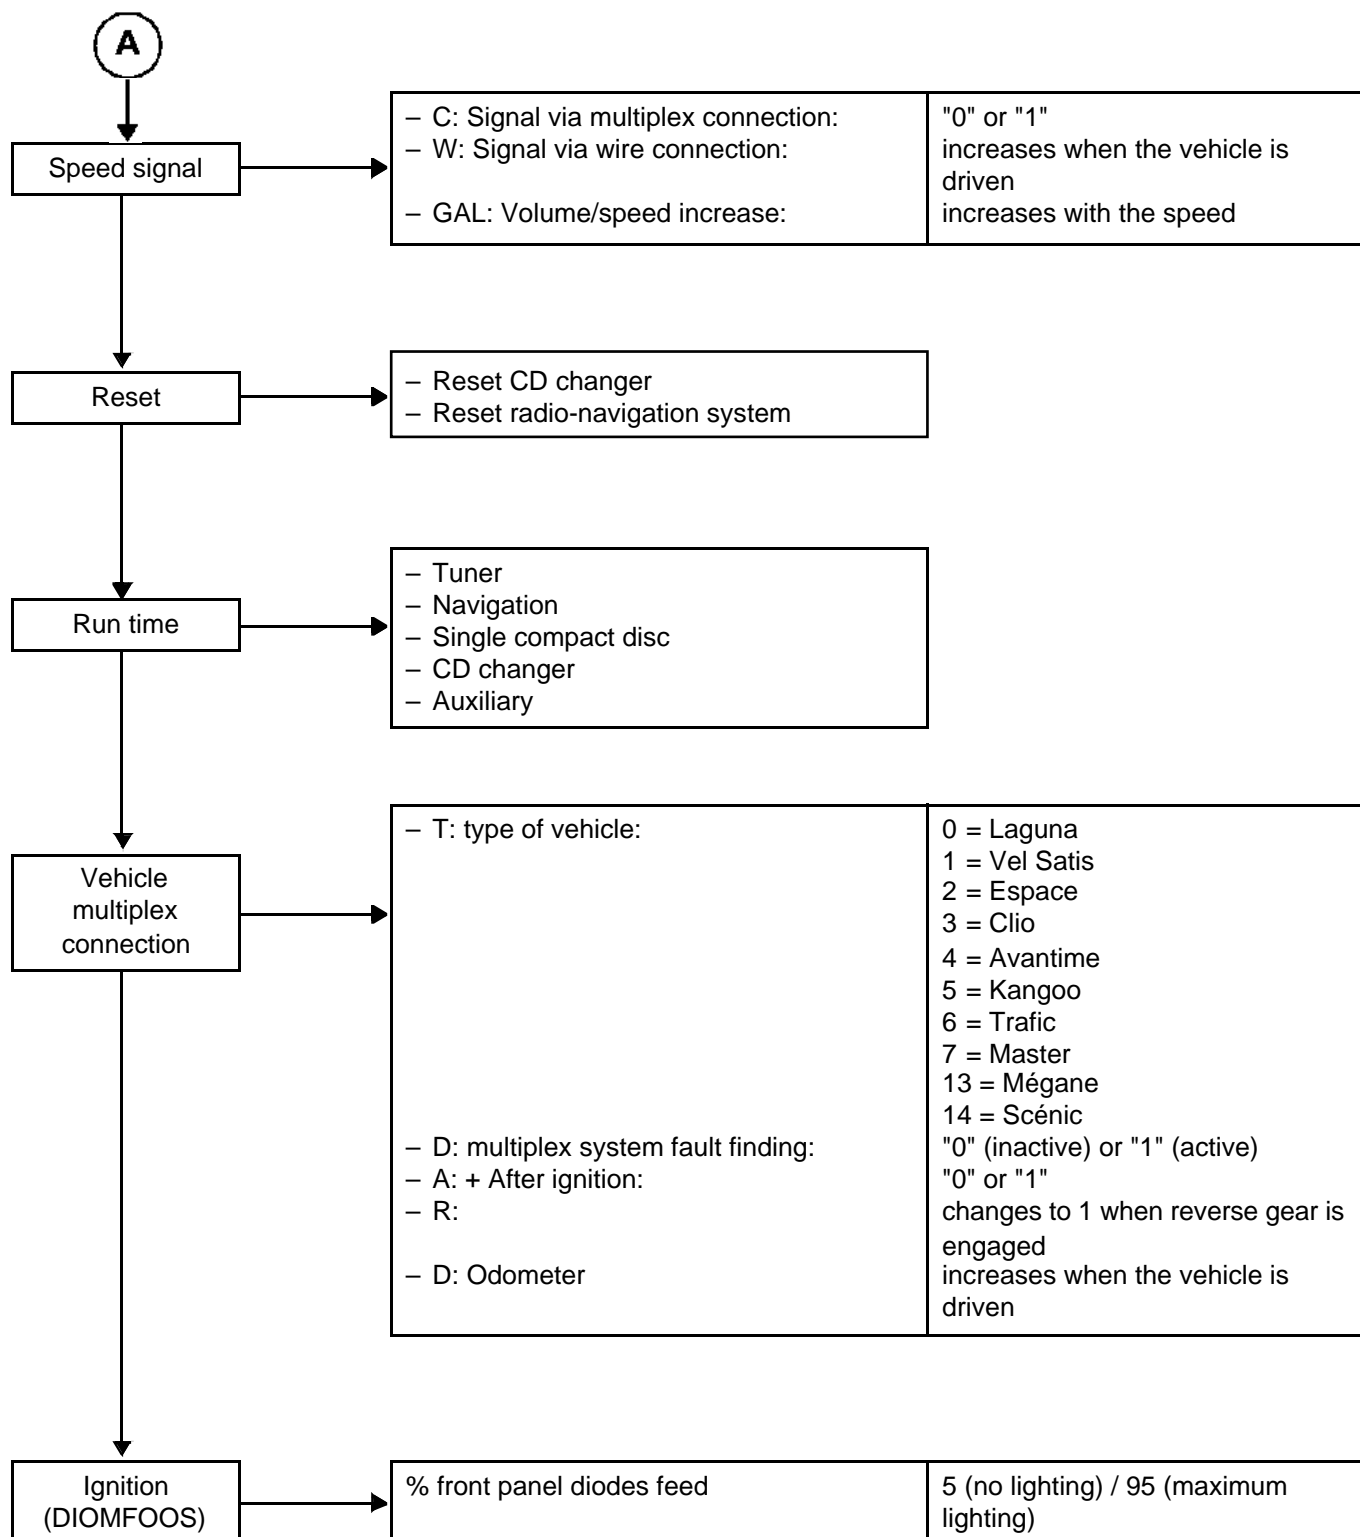

83C

Tightening torque

battery terminal

1.2 daNm

REMOVAL

Disconnect the battery, starting with the negative terminal.

Insert the Ms. 1544 into the two holes (1).
Pull on the two tools in line with the radio-navigation unit.

IMPORTANT

The aerial wire is very fragile. Do not pinch or kink it.

Disconnect the connectors.

Remove the tools by pressing on the latches (2).

Fit all the connectors.

REFITTING

Proceed in the reverse order to removal.

IMPORTANT

Connect the battery, starting with the positive terminal.
Tighten to torque the **battery** terminals (1.2 daNm).
Carry out the necessary programming (refer to **80A Battery: Removal- Refitting** section).

Note:

To set the radio-navigation time, enter the four-digit code, put in the navigation CD-ROM, then go for a drive to capture the satellite signals. The time can then be set.

ON-BOARD TELEMATICS SYSTEM

Entry level navigation system: Aerial

83C

The satellite aerial incorporates the radio aerial (AM / FM), the amplifier and the telephone aerial (dual band).

Note:

Depending on vehicle equipment level, the aerial cables have a connection. This cut-out strip is located behind the rear right-hand quarter panel trim.

ON-BOARD TELEMATICS SYSTEM

CD changer

83C

CHANGER IN THE DASHBOARD

IMPORTANT

The CD changer is supplied uncoded. As soon as the CD changer is installed on a vehicle, it is programmed with the receiver-amplifier code.

The clearing code is required if the security code is lost.

The CD changer is removed from the front panel using special tool (Ms. 1639).

IMPORTANT

Transport piece (A) must be removed before a new CD changer is connected, otherwise the CD changer could be damaged.

CHANGER IN THE DASHBOARD

IMPORTANT
The CD changer is uncoded. It is fully interchangeable with any other **entry level** or **top-of-the-range** radio.

THE RADIO-NAVIGATION SYSTEM BEEPS APPROXIMATELY EVERY SECOND

ALP 1

THE RADIO-NAVIGATION SYSTEM DOES NOT WORK (NO SOUND) WHEN "RADIO ON" IS PRESSED

ALP 2

THE RADIO DOES NOT SWITCH ON AUTOMATICALLY OR GOES OFF AFTER 20 MINUTES

ALP 3

THE RADIO-NAVIGATION SYSTEM IS SWITCHED ON, BUT THE DISPLAY AND SATELLITE DO NOT WORK

ALP 4

THE DISPLAY DOES NOT WORK

ALP 5

THE DISPLAY ON THE SCREEN STAYS FROZEN

ALP 6

NO TIME DISPLAY OR TIME DISPLAY INCORRECT

ALP 7

LIGHTING DOES NOT CHANGE WHEN THE VEHICLE LIGHTS ARE SWITCHED ON

ALP 8

THE VOLUME DOES NOT INCREASE WITH THE VEHICLE SPEED

ALP 9

NO GUIDANCE VOICE MESSAGES

ALP 10

NO MUTING WITH A HANDS-FREE TELEPHONE KIT → ALP 11

RADIO RECEPTION FAULTS → ALP 12

POOR SATELLITE RECEPTION → ALP 13

THE CD CHANGER DOES NOT WORK → ALP 14

IMPOSSIBLE TO ACTIVATE GUIDANCE → ALP 15

FOLLOWING A NAVIGATION CD ROM UPDATE, THE SYSTEM DOES NOT WORK → ALP 16

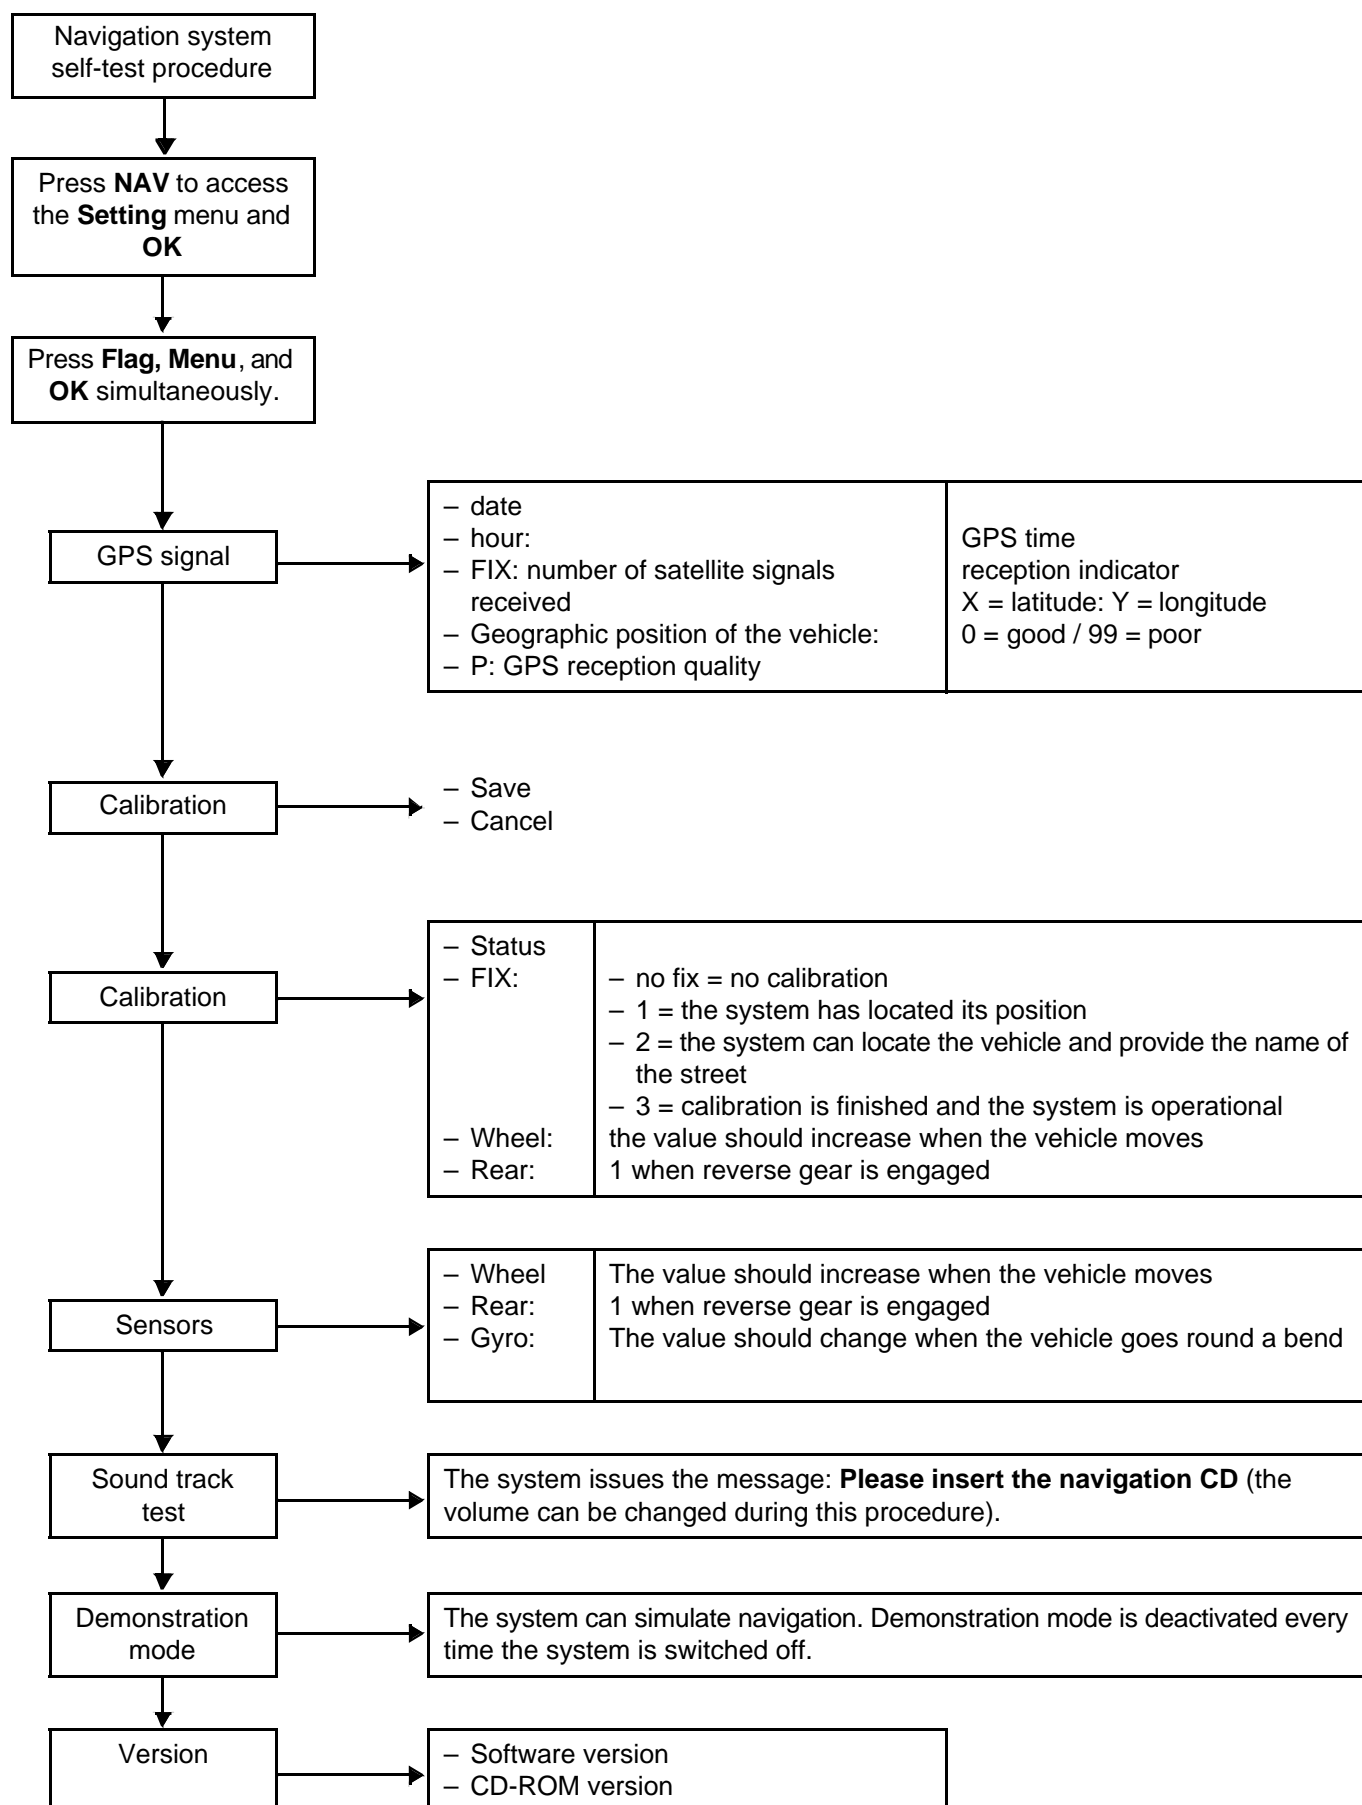

THE SCREEN STAYS PERMANENTLY BLACK → ALP 17

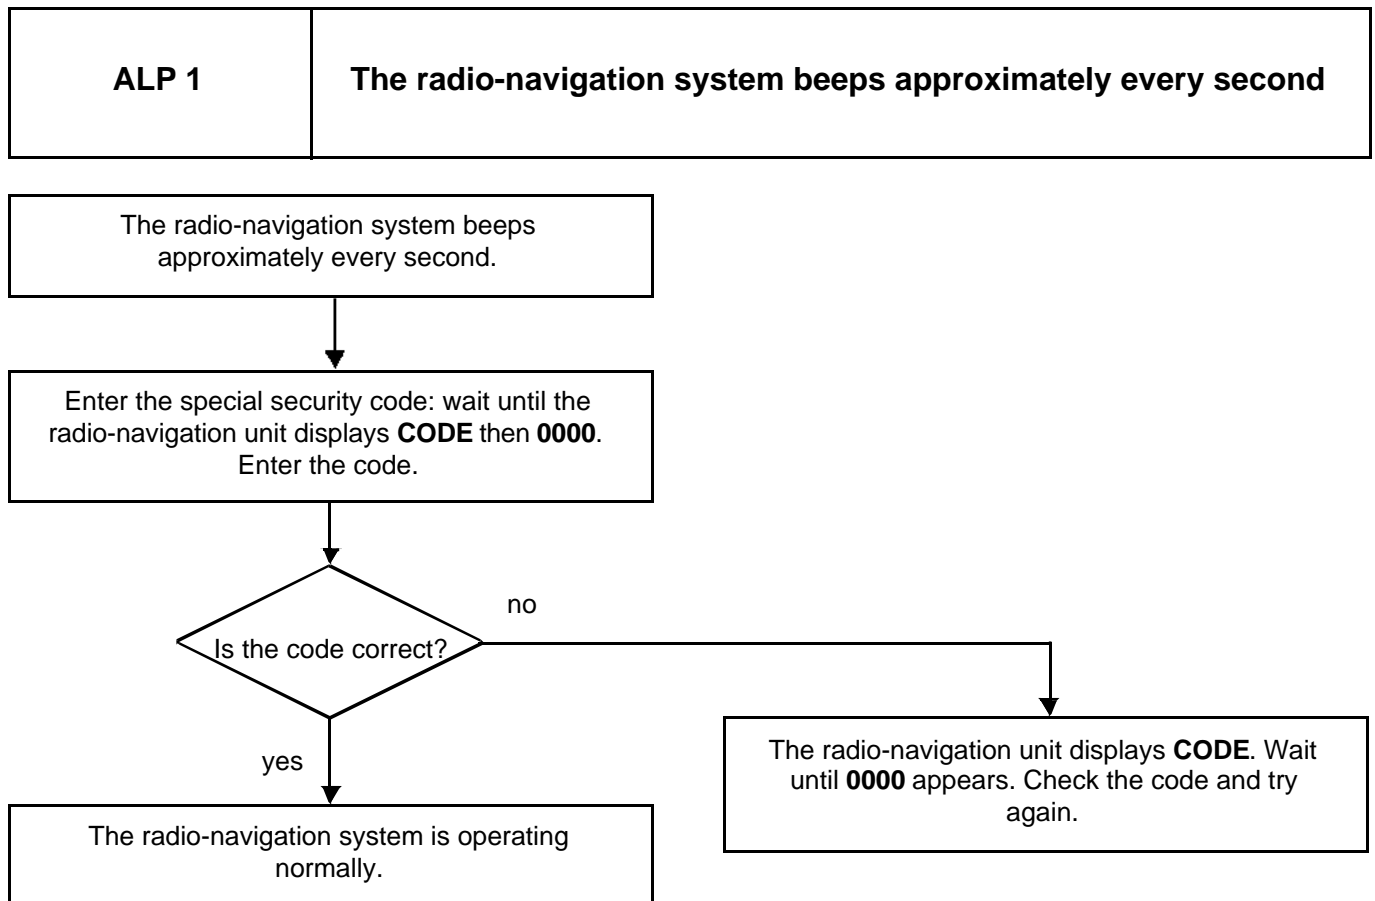

IMPORTANT

Faults are often related to radio-navigation software (bugs). For example, the keypad becomes inoperative, the radio does not operate correctly, the display or the sound are faulty...

Often, disconnecting the radio-navigation unit and then reconnecting it after a few seconds (by the connector or the fuse) or using the **RESET** menu function is all that is needed to solve this type of fault.

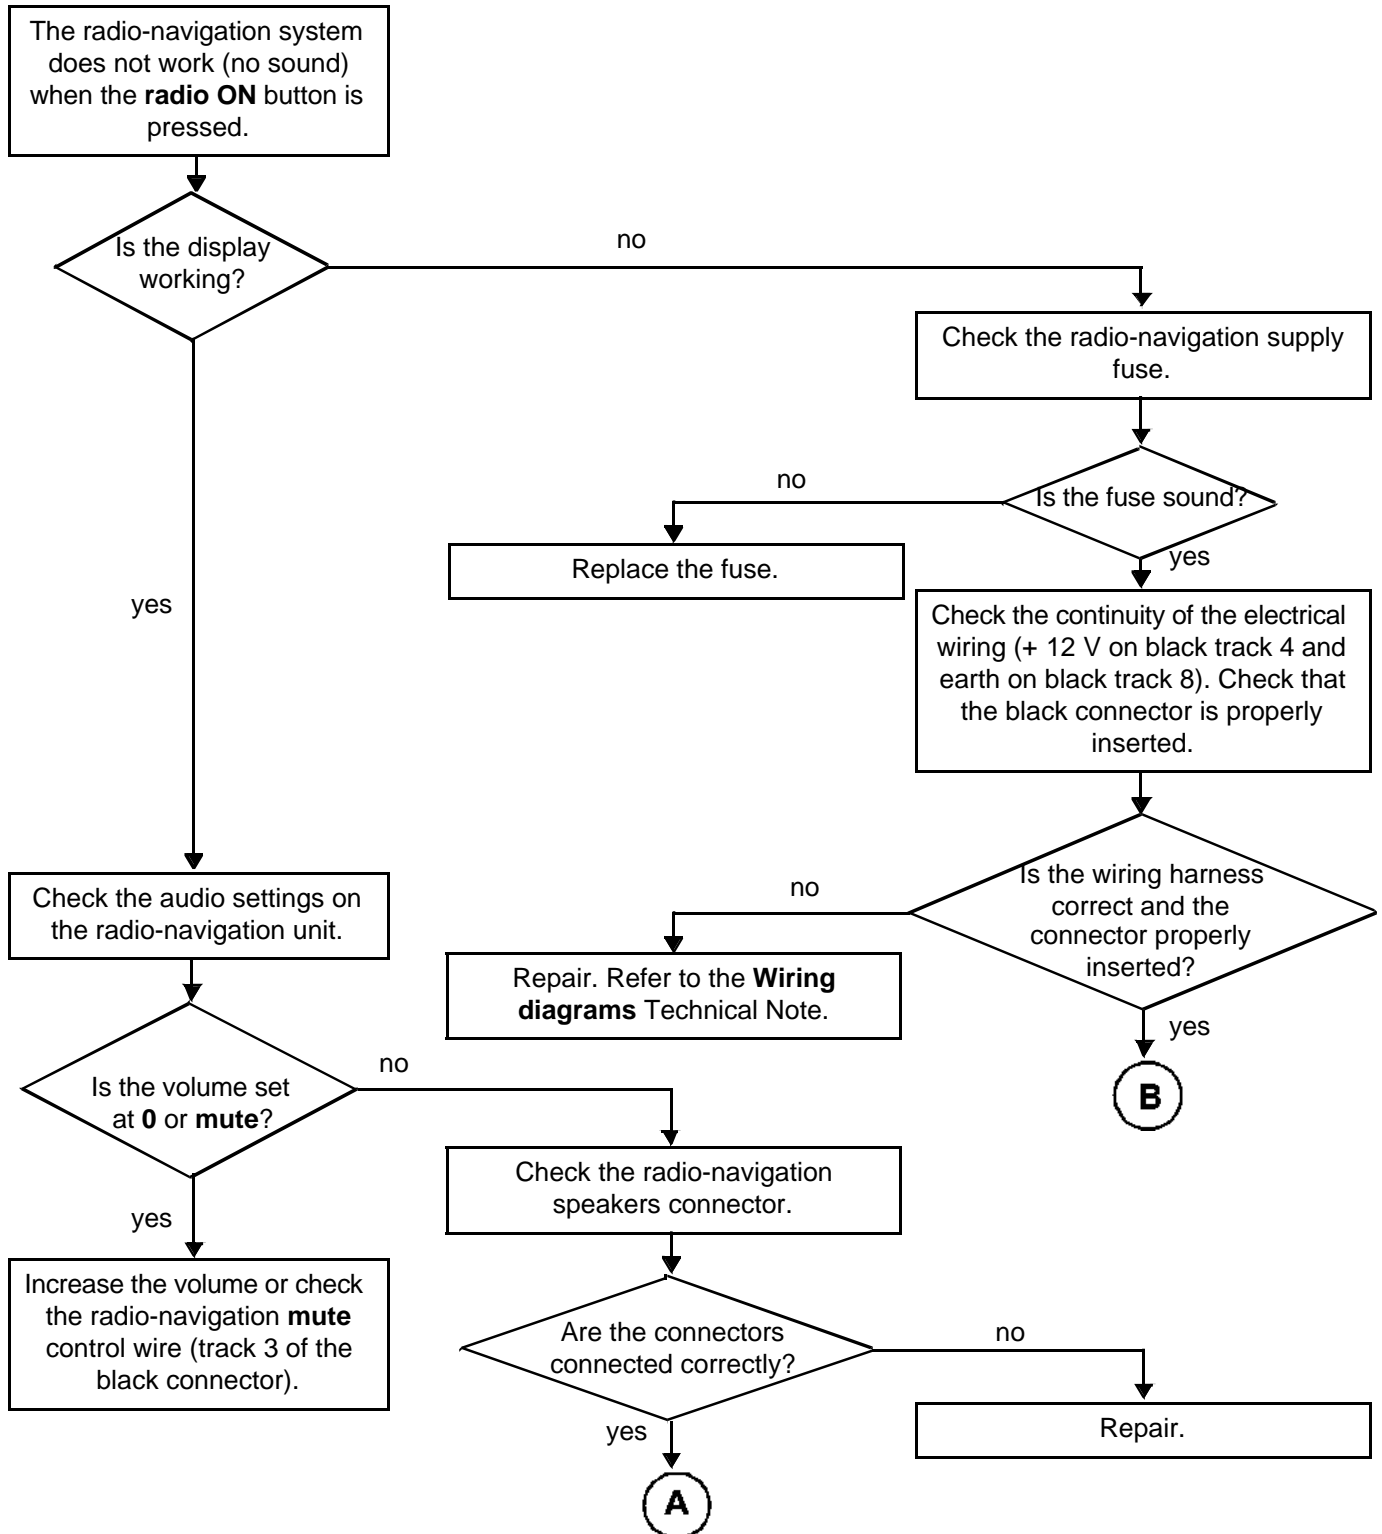

Carry out this operation before checking the wiring harness and before replacing either the radio-navigation unit or the display.

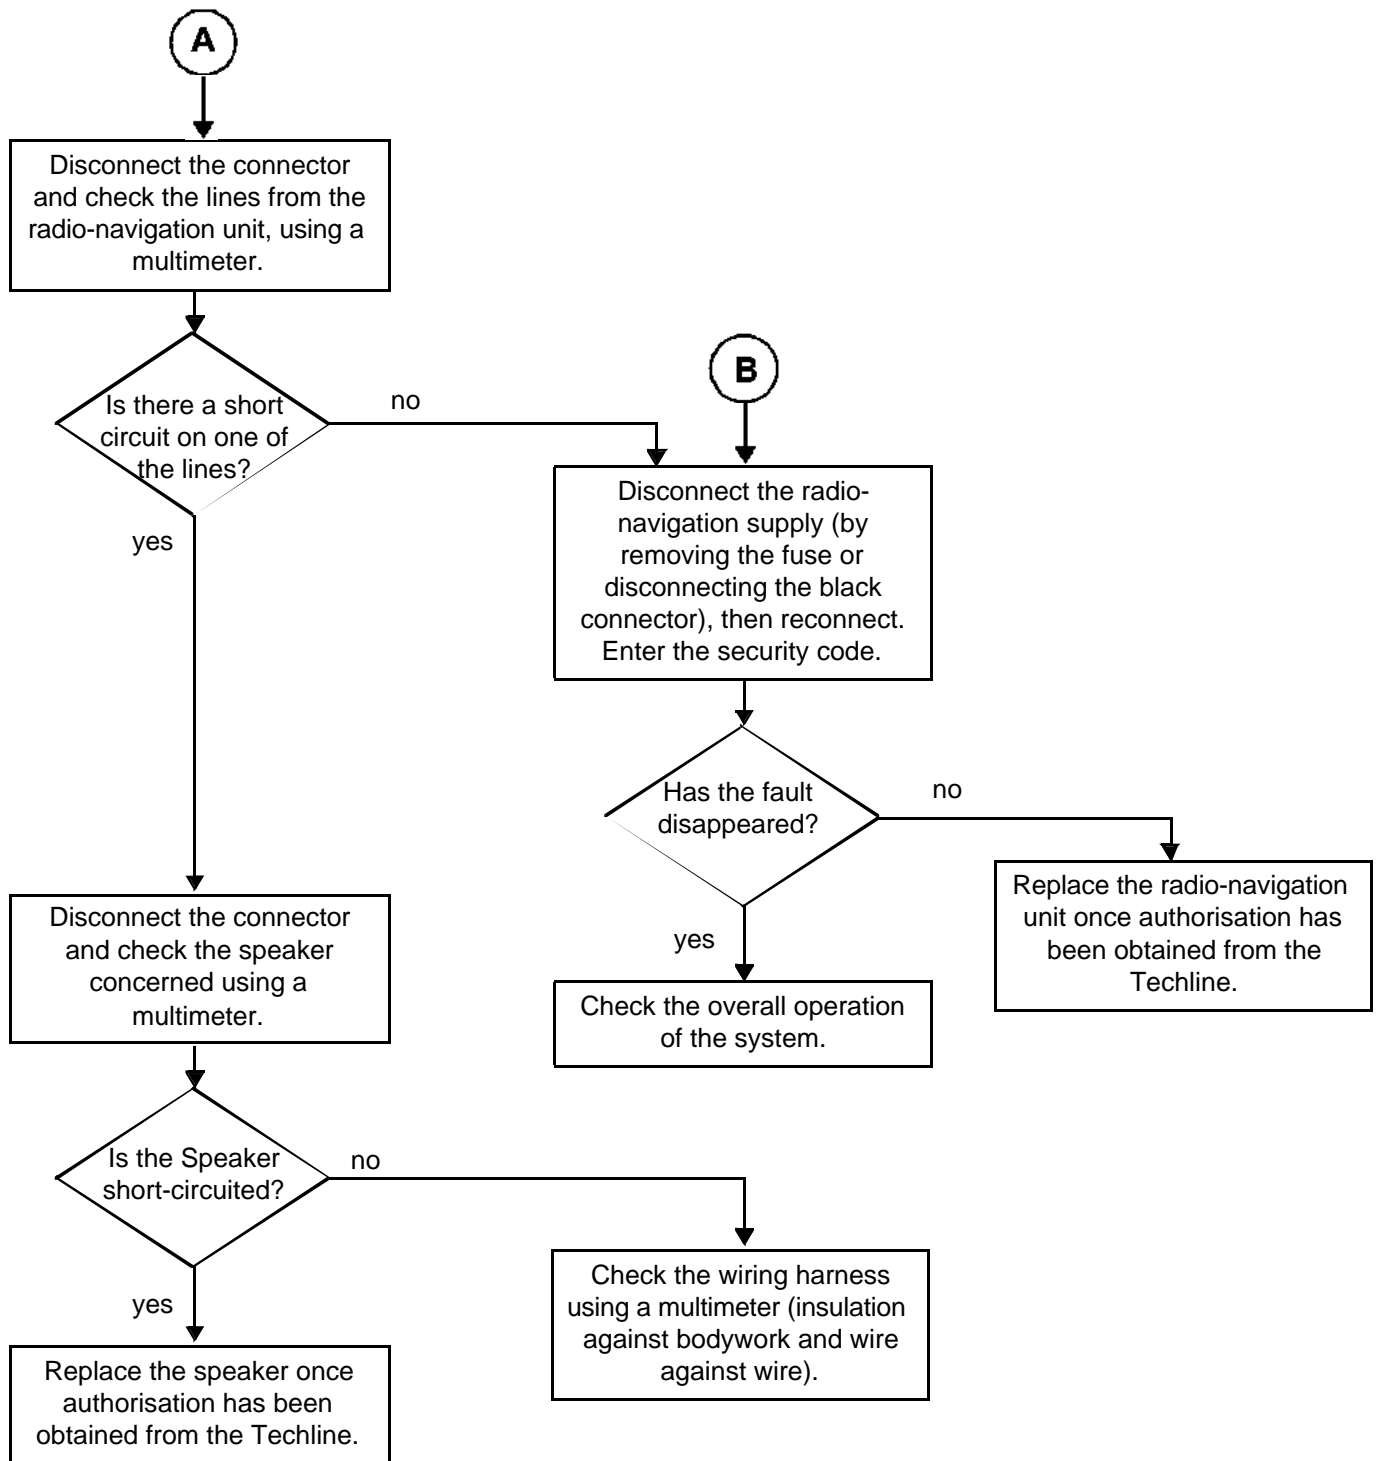

ALP 2

The radio is inoperative (no sound)

ALP 3

The radio does not switch on automatically or goes off after 20 minutes

The radio does not switch on automatically when **+ accessories feed** is switched on or goes off after **20 minutes**.

Check that the system is operating normally:

- Connect the **+ accessories** feed,
- Switch on the radio,
- Cut the **+ accessories** feed, the radio should switch off,
- Reconnect the **+ accessories** feed, the radio should switch on.

In the **audio system fault finding** menu, check for **+ accessories**

Is the **+ accessories** status equal to 1?

yes

no

Check the **+ accessories feed** using a multimeter.

Is **+ 12 V** present on black track 7?

yes

no

Replace the radio-navigation unit once authorisation has been obtained from the Techline.

Check the power supply fuses.

Are the fuses sound?

no

yes

Replace the fuse.

Check the continuity of the wiring harness: Refer to the **Wiring diagrams** Technical Note.

ALP 4

The display does not work

The radio-navigation system works but the display does not light up, (the satellite controls do not work).

Check that the display lights up when the lights or **+ accessories** are switched on.

Does the screen light up?

no

Check the display supply (the fault is not associated with the radio-navigation system).

- + 12 V on track 9
- + accessories on track 7
- **radio ON** feed on track 12
- earth on track 5 of the green 30 track connector

yes

Check the radio / display wiring harness: multiplex connection on tracks 7 and 16 (black vertical connector) / 29 and 30 (display).

Is the wiring harness correct and are the connectors properly inserted?

no

Repair the wiring harness.

yes

Disconnect then reconnect the display.

Is the fault still present?

no

Check the overall operation of the system.

Disconnect and reconnect the radio-navigation feed (black ISO connector). If the fault is still present, replace the display.

If the fault is still present, replace the radio-navigation unit once authorisation has been obtained from the Techline.

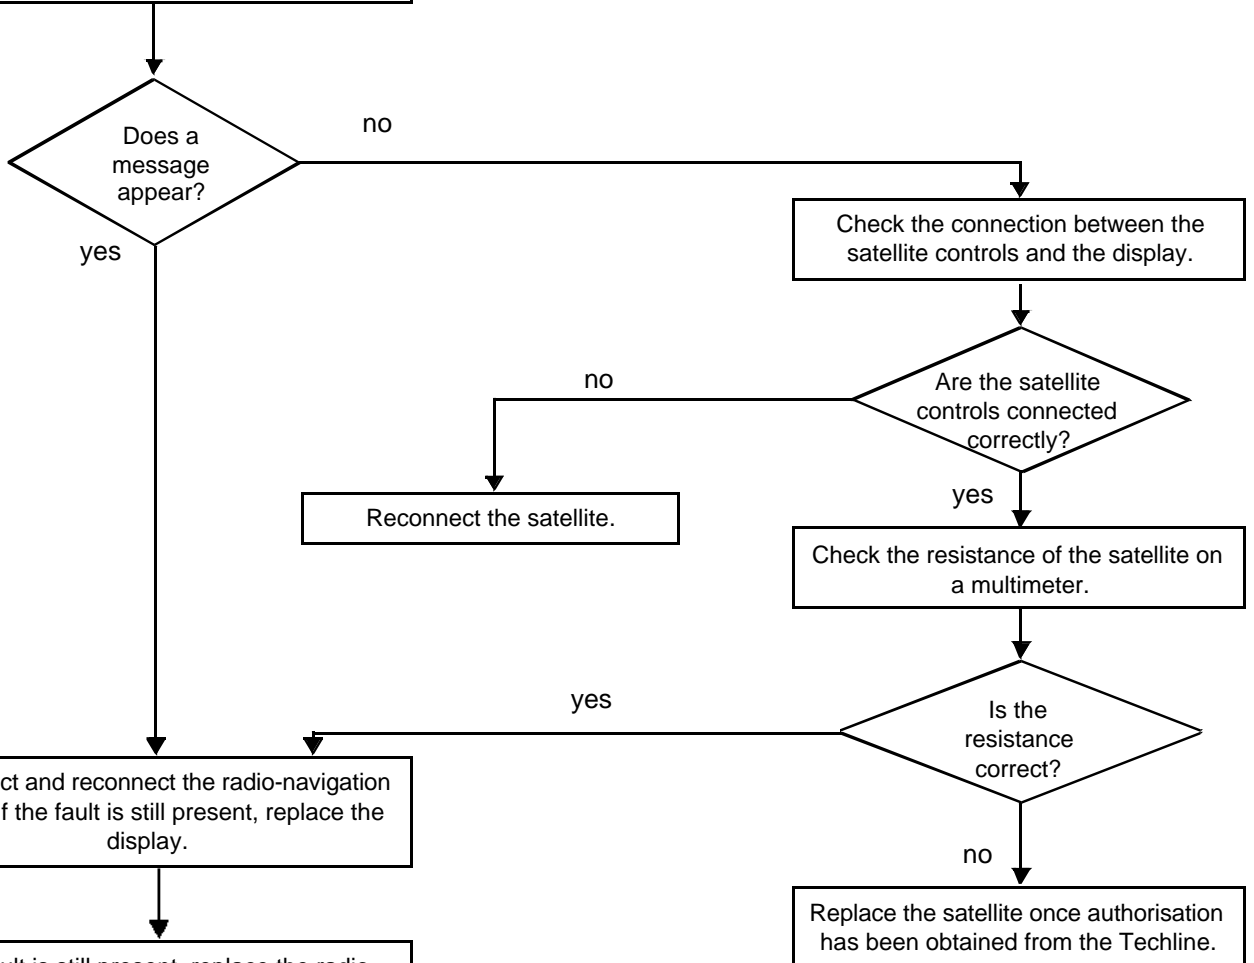

ALP 5

The satellite controls do not work

The radio works but the satellite controls do not.

Press the **i** and **Audio** buttons, then select **Satellite**. Every time a button on the satellite is activated, a message should appear on the screen.

ALP 6

The on-screen display is frozen or the time and temperature display is locked

Switch off the ignition and wait until the system shuts down completely (at least 1 minute). Switch on the ignition again.

Has the fault disappeared?

no

yes

Check the overall operation of the system.

Check the multimedia multiplex connection between the radio-navigation unit and the display:
– tracks 16/29
– tracks 7/30

Were the checks OK?

no

Repair the wiring harness.

yes

Disconnect then reconnect the display.

Is the fault still present?

no

Check the overall operation of the system.

yes

Disconnect and reconnect the radio-navigation supply. If the fault is still present, replace the display.

If the fault is still present, replace the radio-navigation unit once authorisation has been obtained from the Techline.

ALP 7

No display or incorrect time displayed on screen

Position the vehicle outside in a mapped geographical area. Insert the navigation CD-ROM.

In the **Adjust clock** menu, alter the time setting and confirm.

Is the adjustment successful?

no

yes

The time displayed is the time regulated by the satellite signal (cannot be fast or slow).

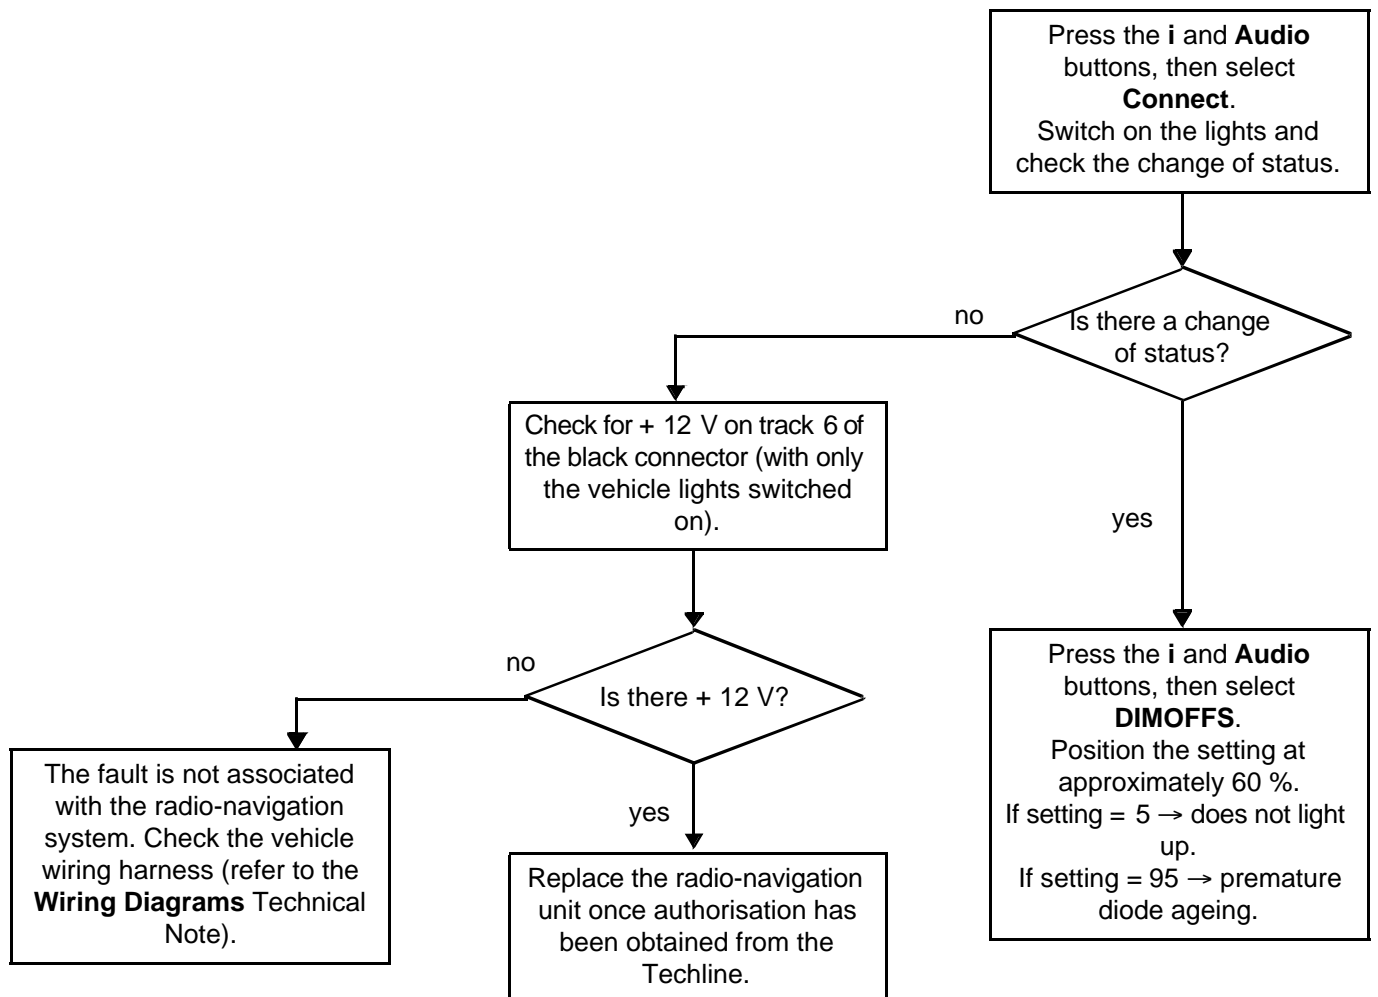

Note:

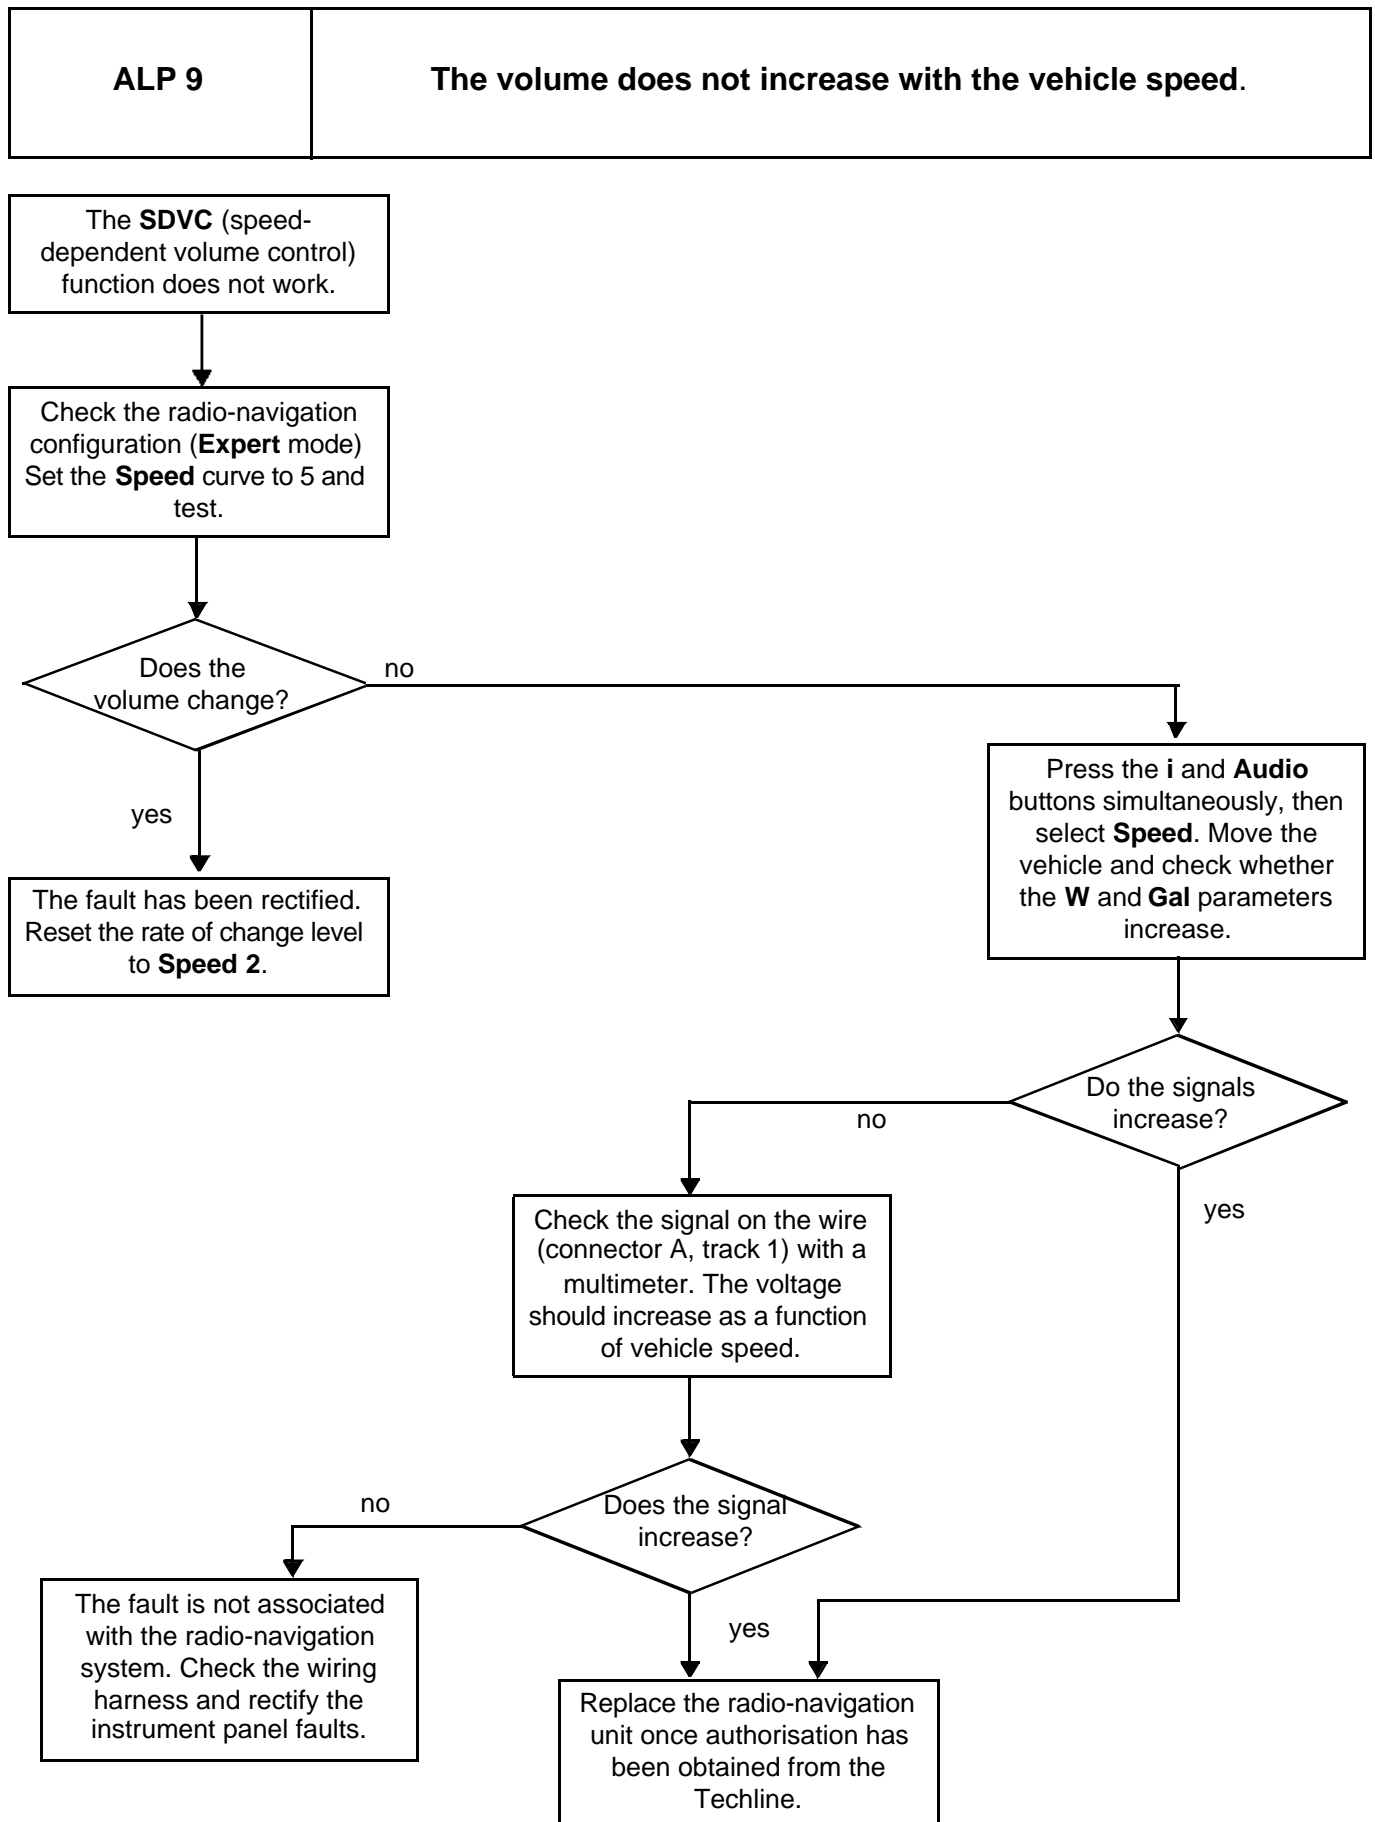

The change from summer time to winter time is made by the customer.

The screen displays: **adjustment failed**. Check satellite reception. The FIX indicator must be > 0 (that may take several minutes after positioning the vehicle outside).

ALP 8

No change in lighting when the lights are switched on (on the front panel of the radio-navigation unit)

Voice messages are broadcast via the vehicle's speakers. Check their operation by pressing the **i** and **Audio** buttons, then select **Speech test**. The radio-navigation system then emits alternating sound signals.

Do the
loudspeakers
operate?

no

Refer to the relevant fault finding chart.

In the **Settings** menu, press the **Menu** and **OK** buttons, then select **Speech test**.

Can the message
be heard?

no

yes

Select **Speech test** again to listen to a message. While the message is being broadcast, increase the volume using the rotary knob.

Can the message
be heard?

no

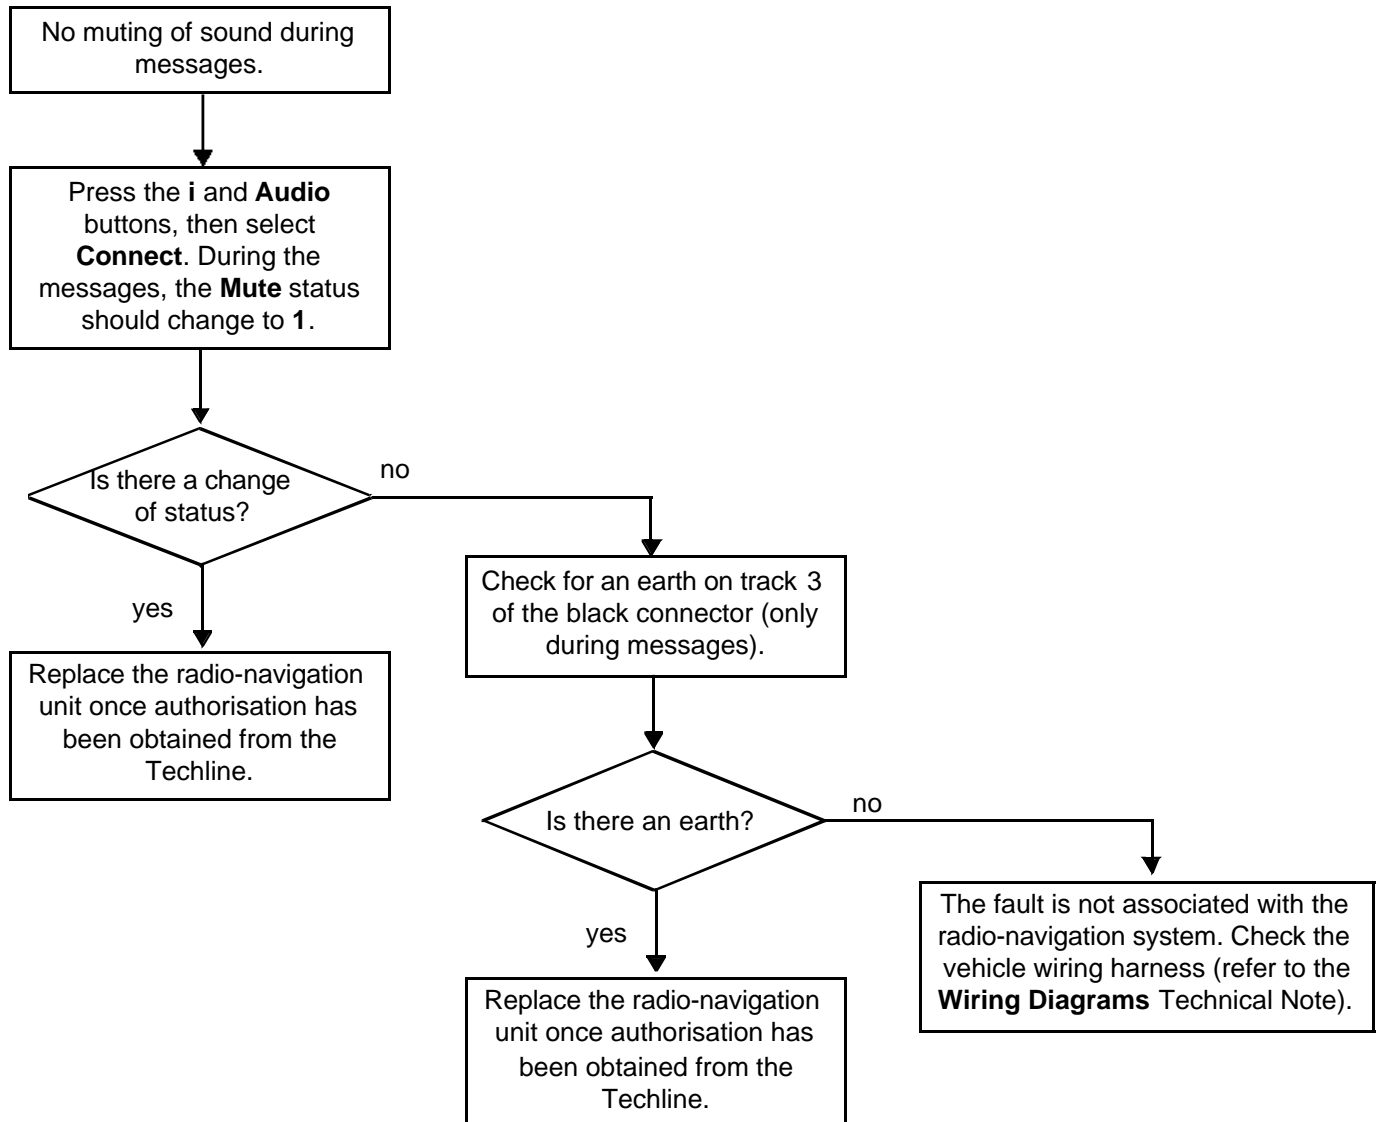

yes

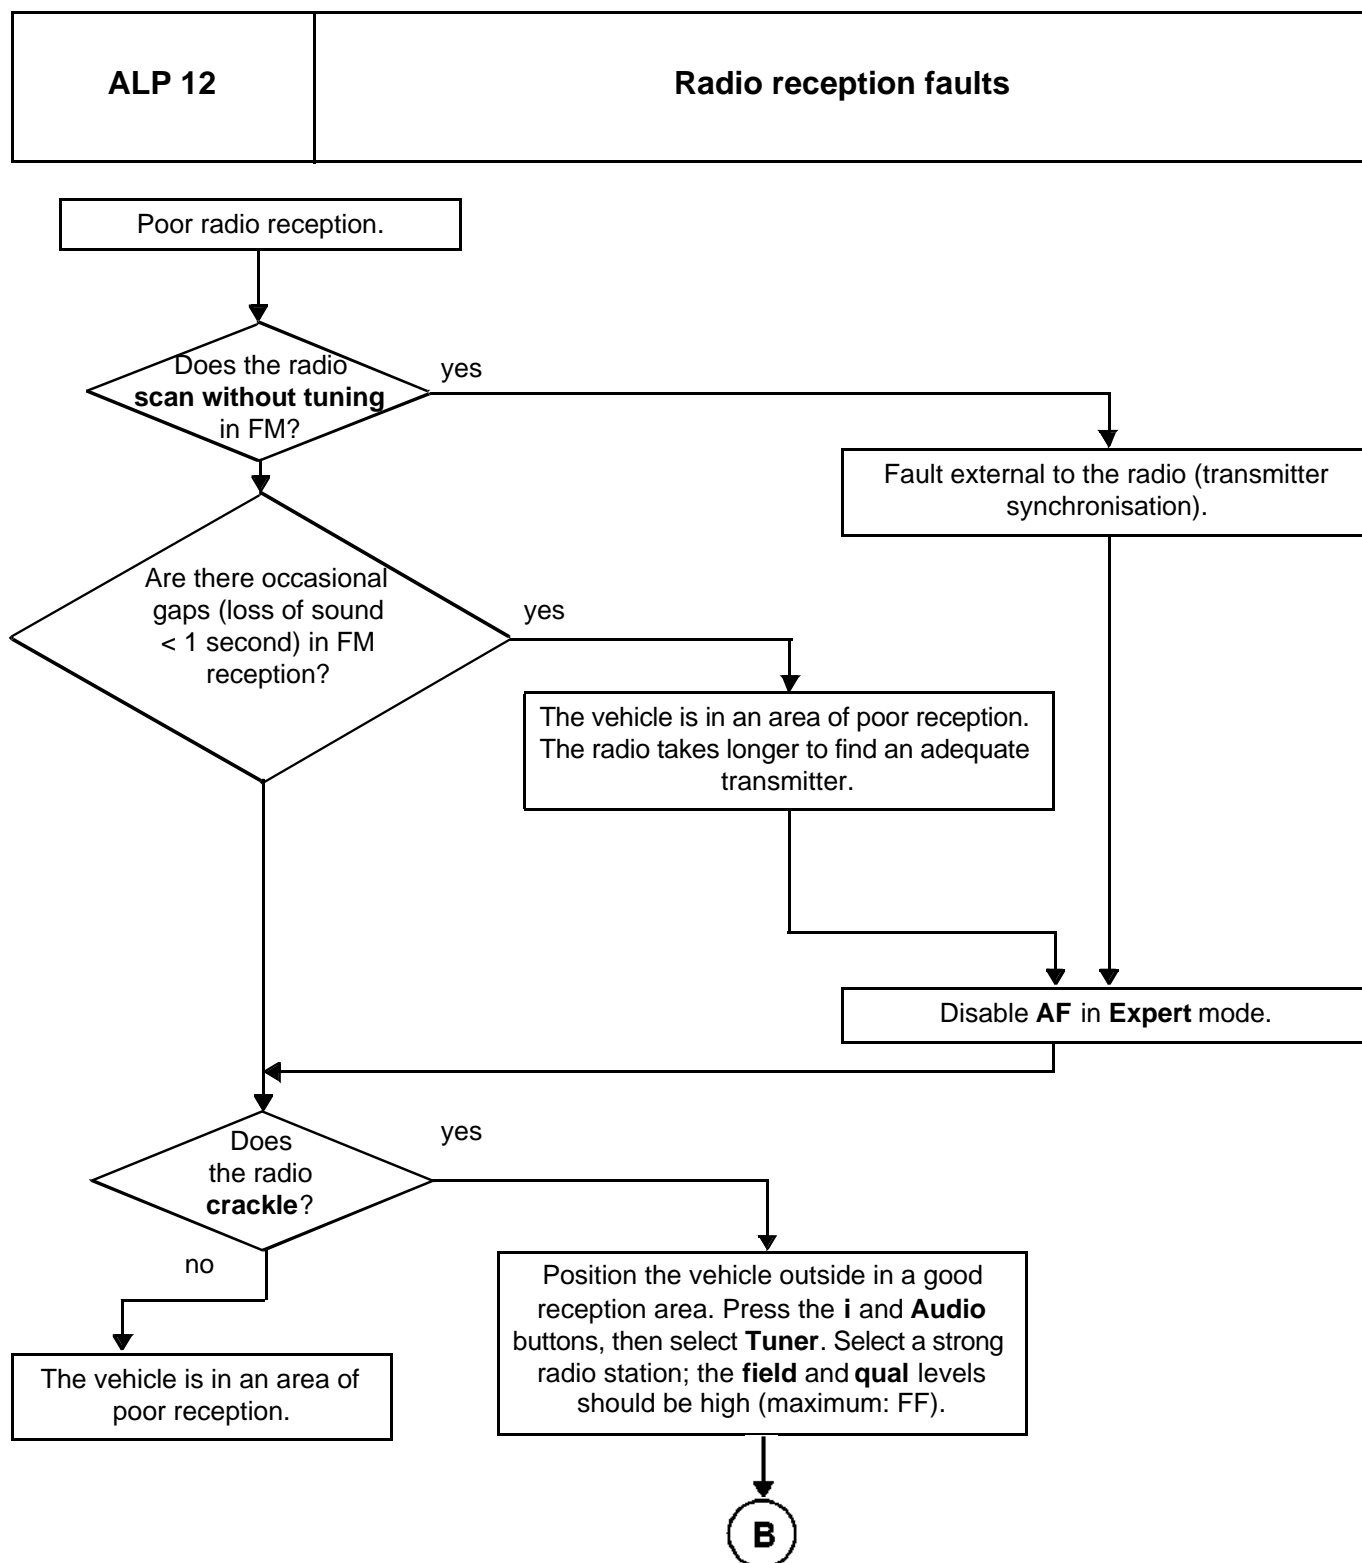

The system has no voice message faults. Restart guidance and check the operation of the system.

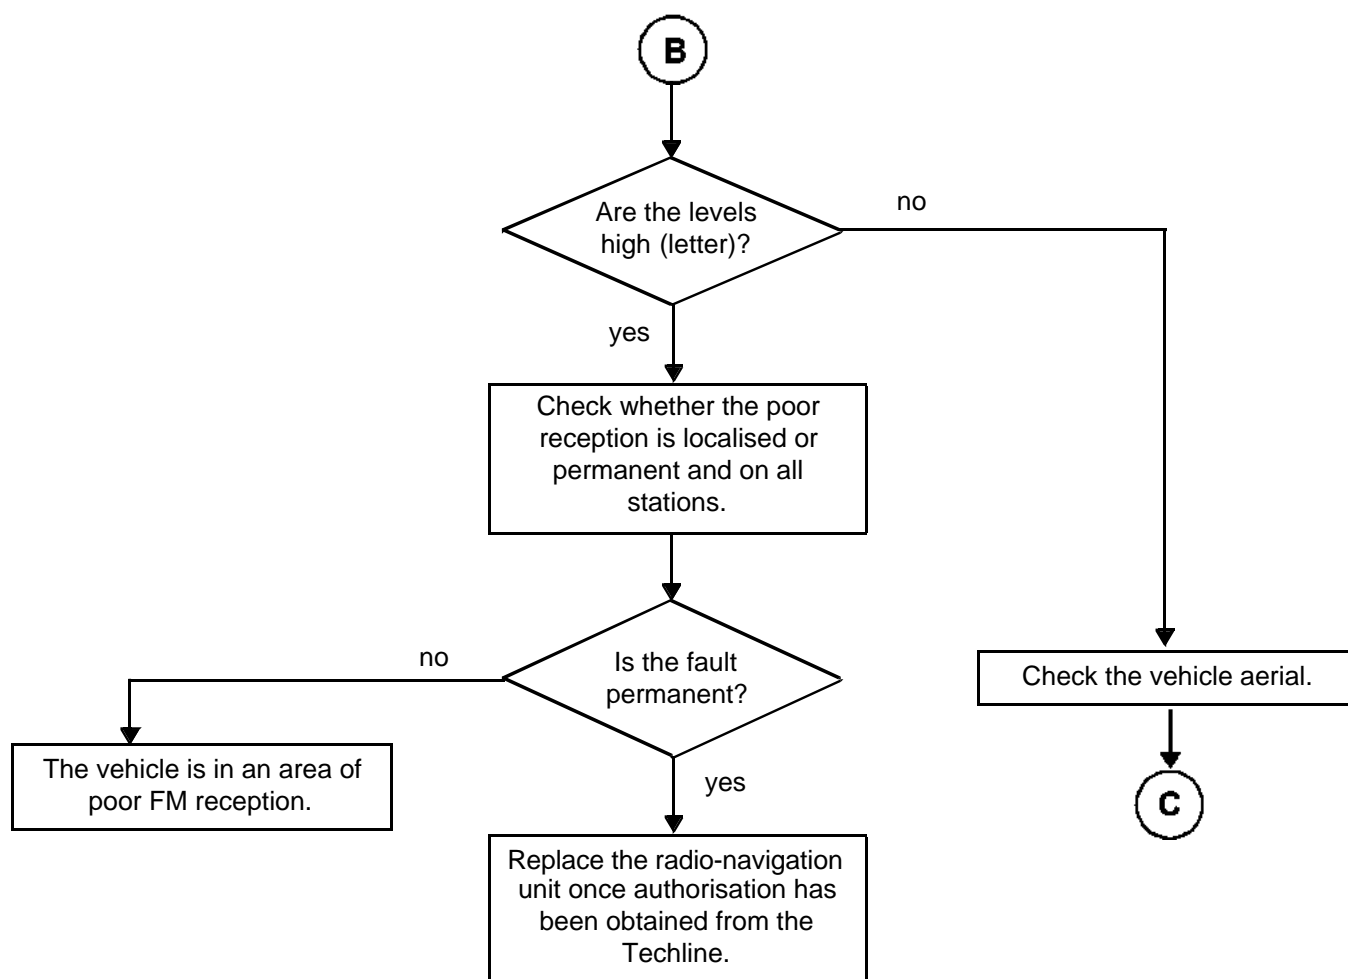

Replace the radio-navigation unit once authorisation has been obtained from the Techline.

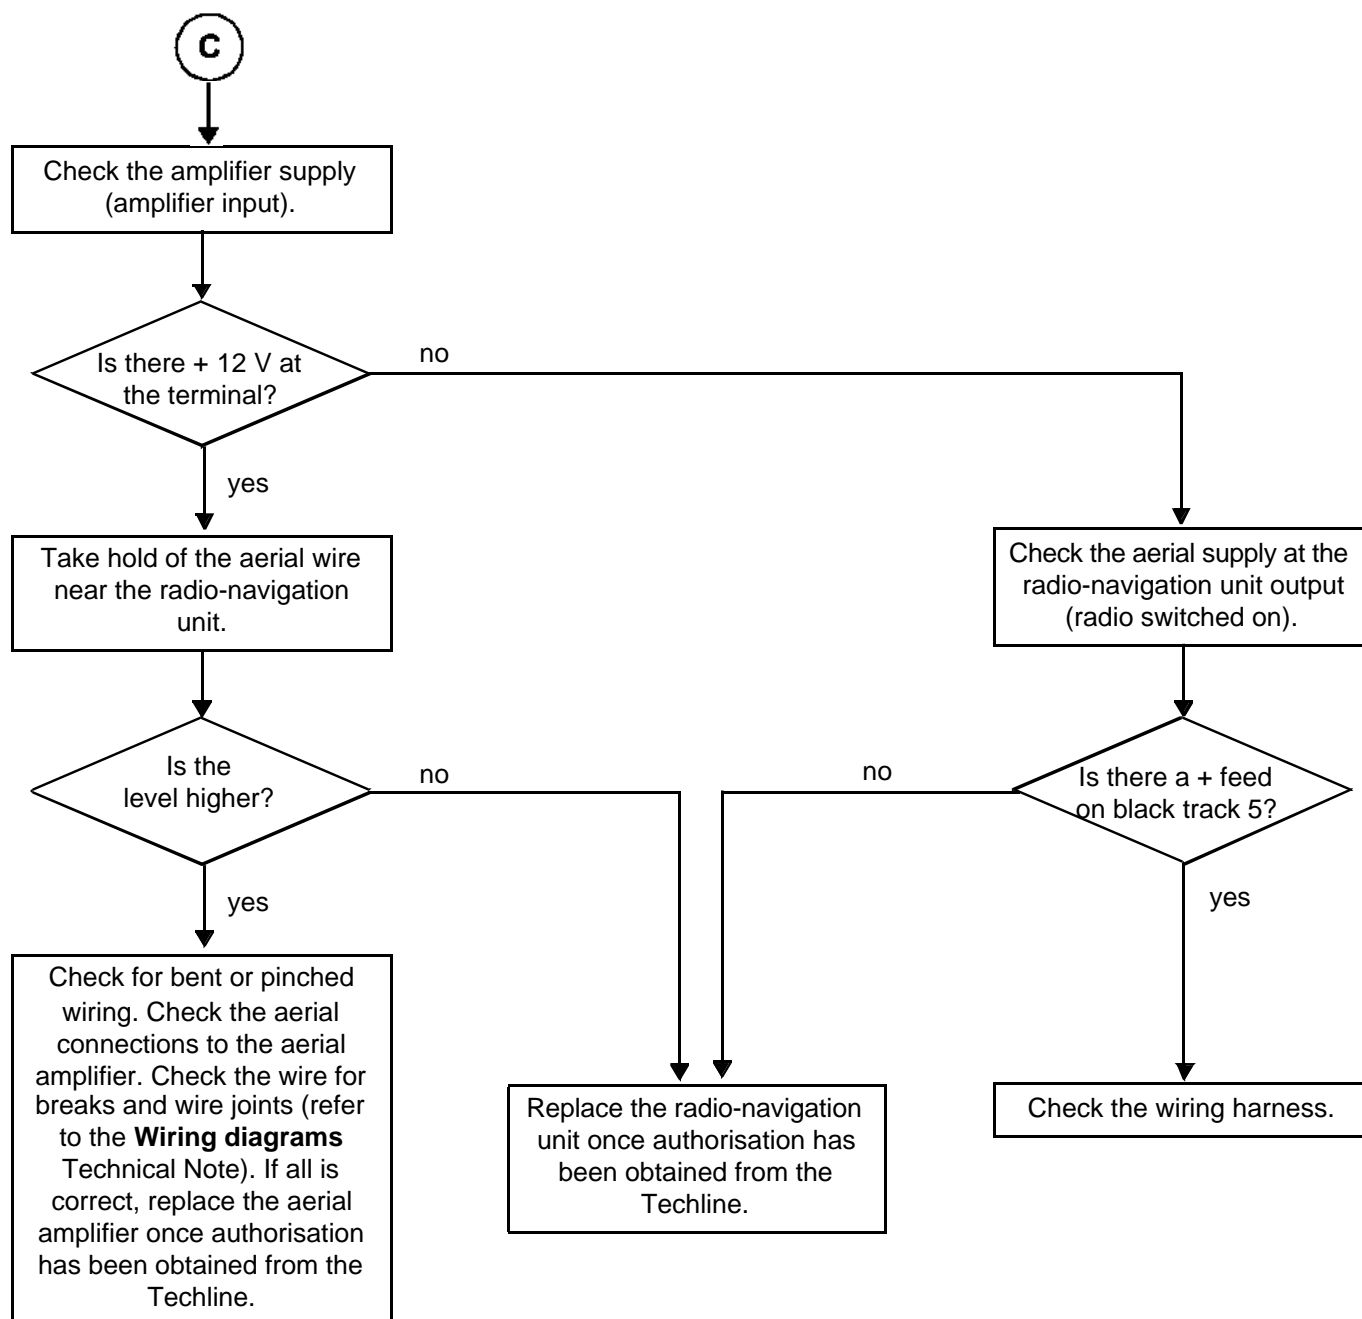

ALP 11

No muting with a hands-free telephone kit

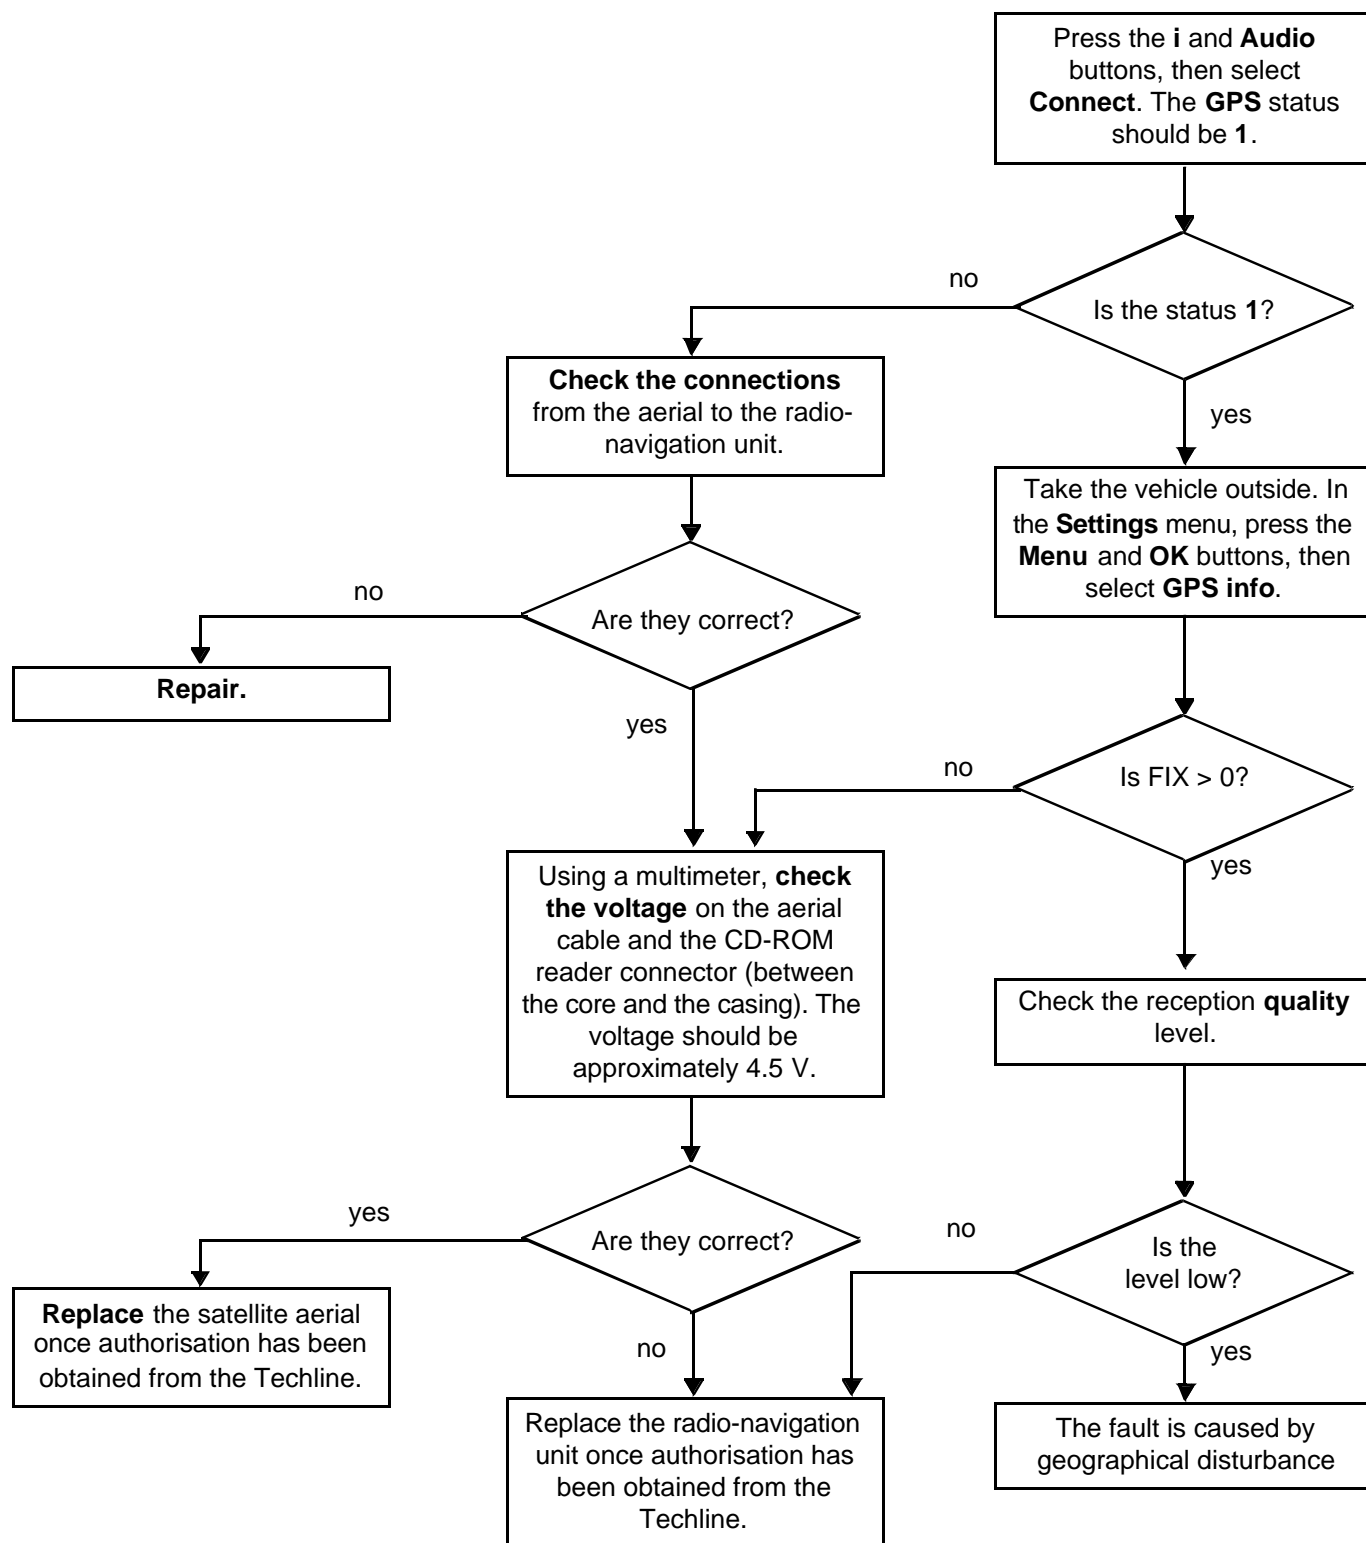

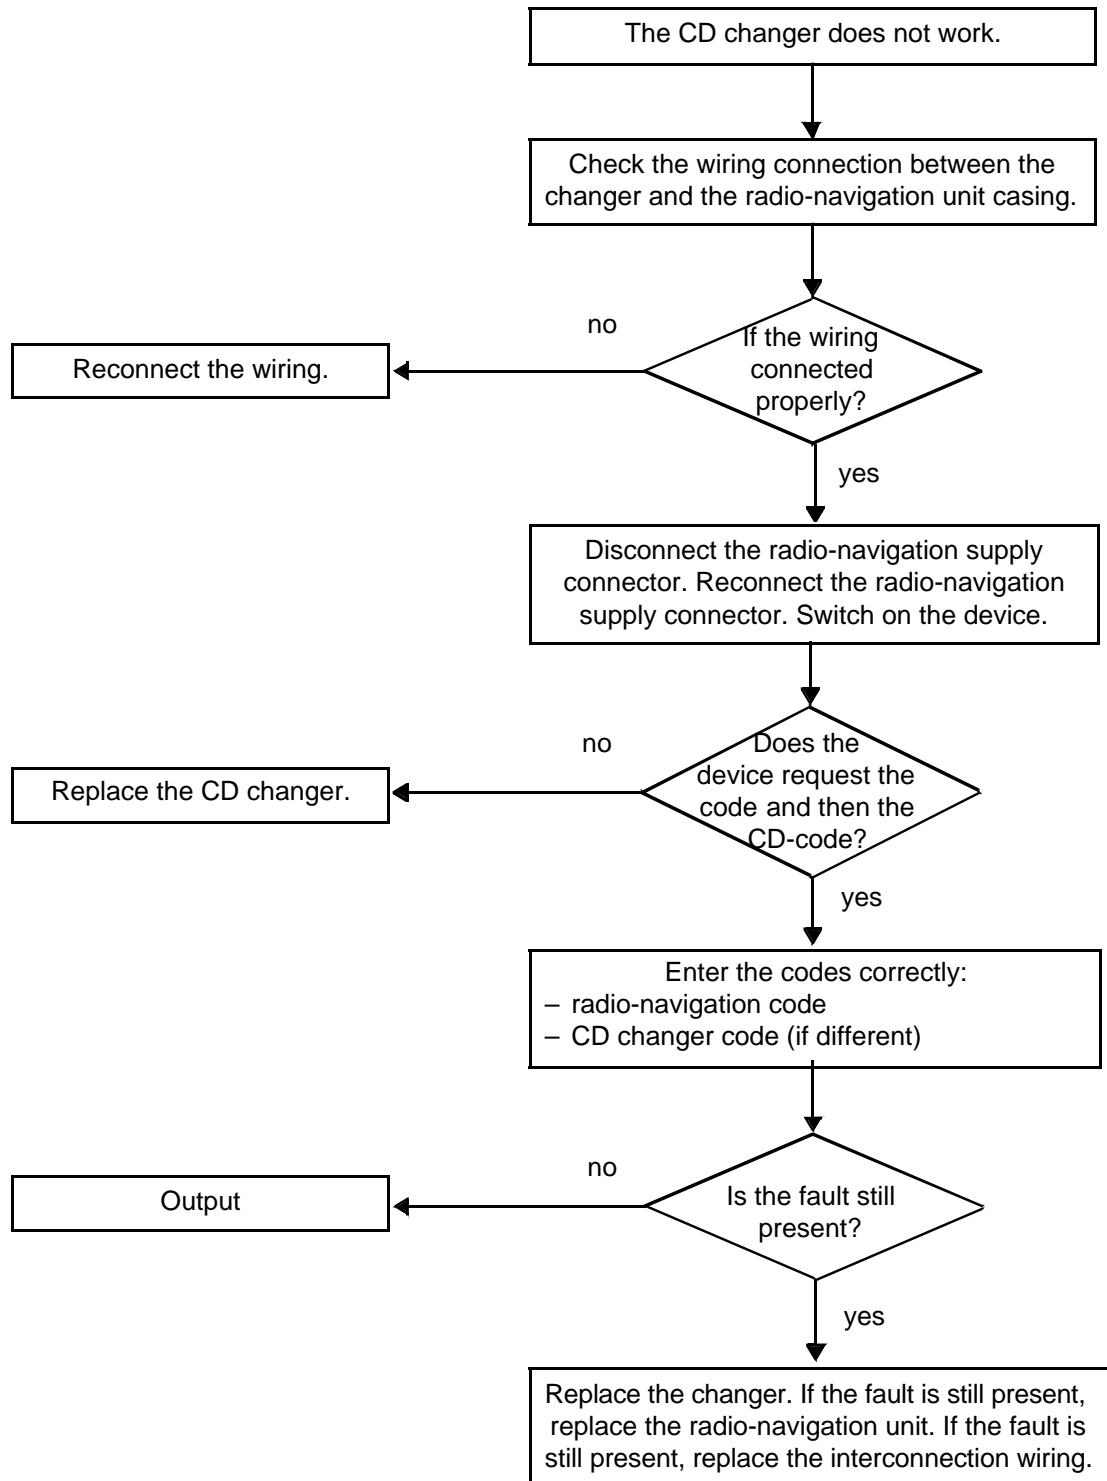

ALP 13

Poor satellite reception

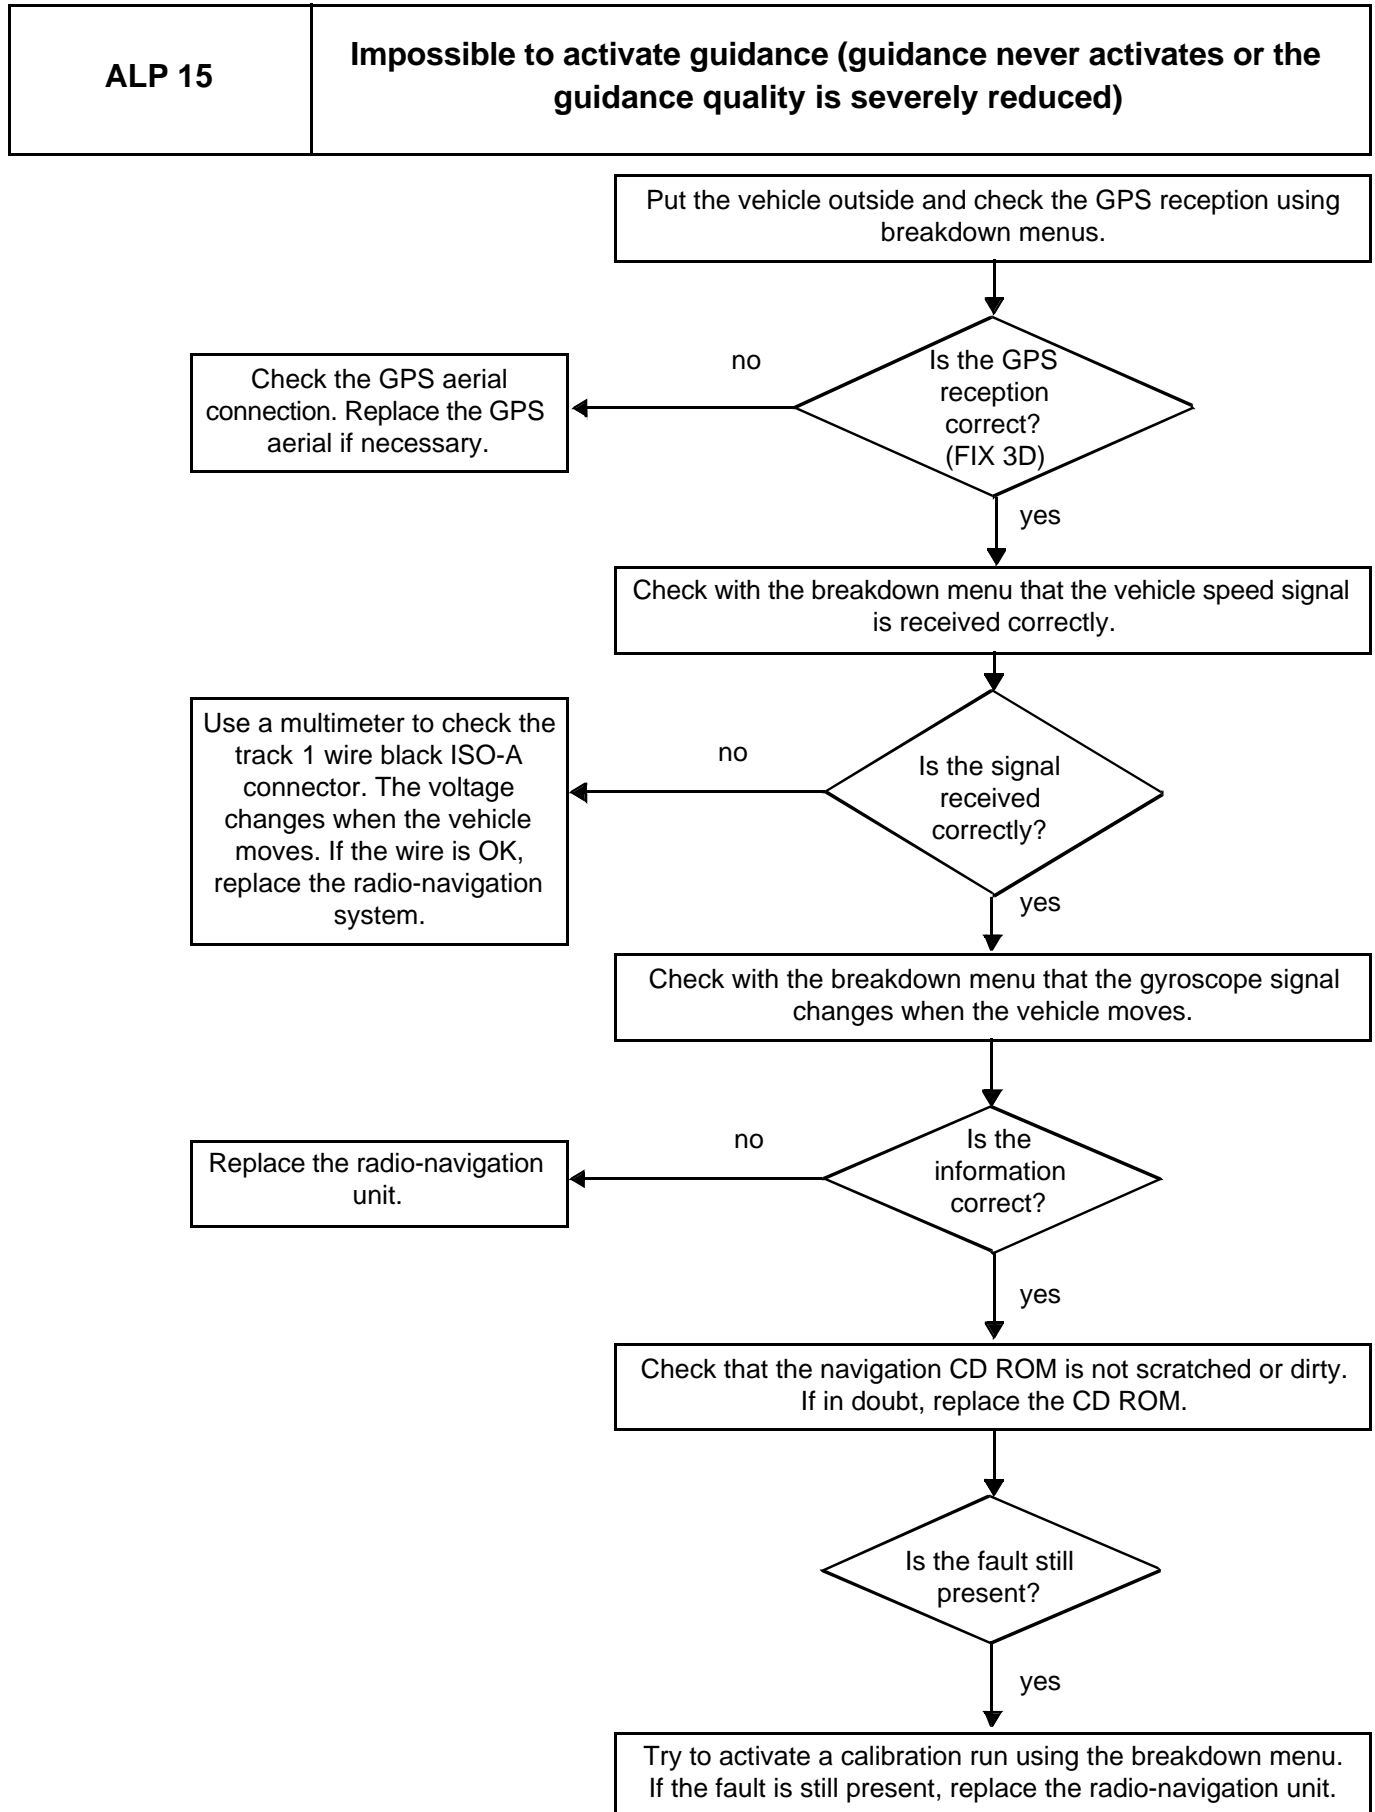

ALP 14

The CD changer does not work (no sound or impossible to access the CDC source)

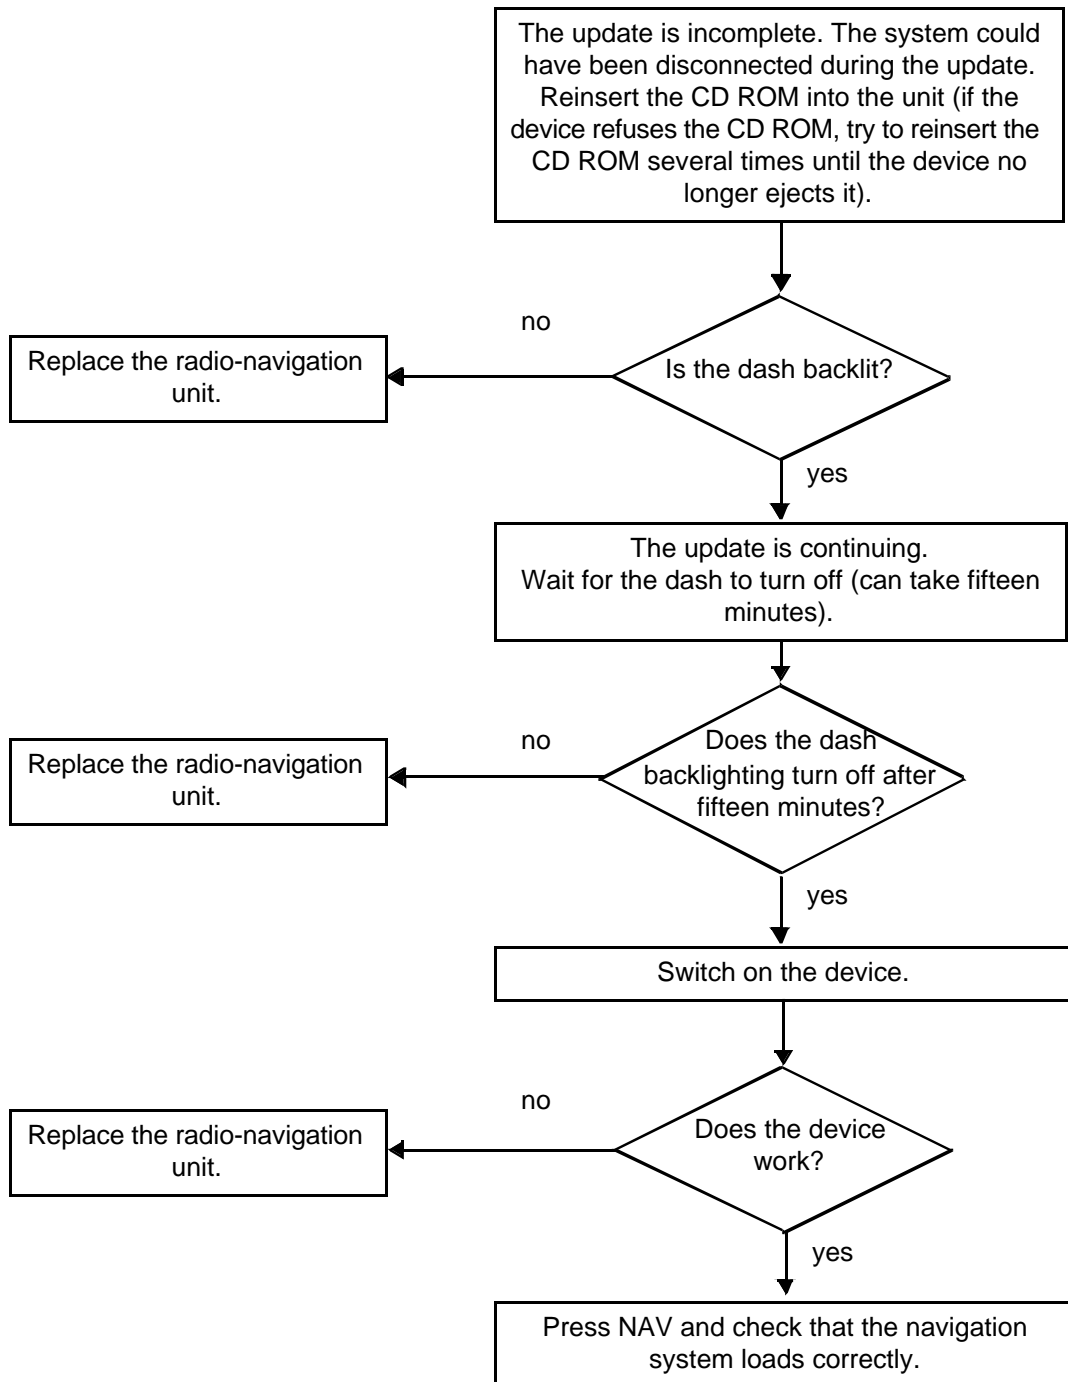

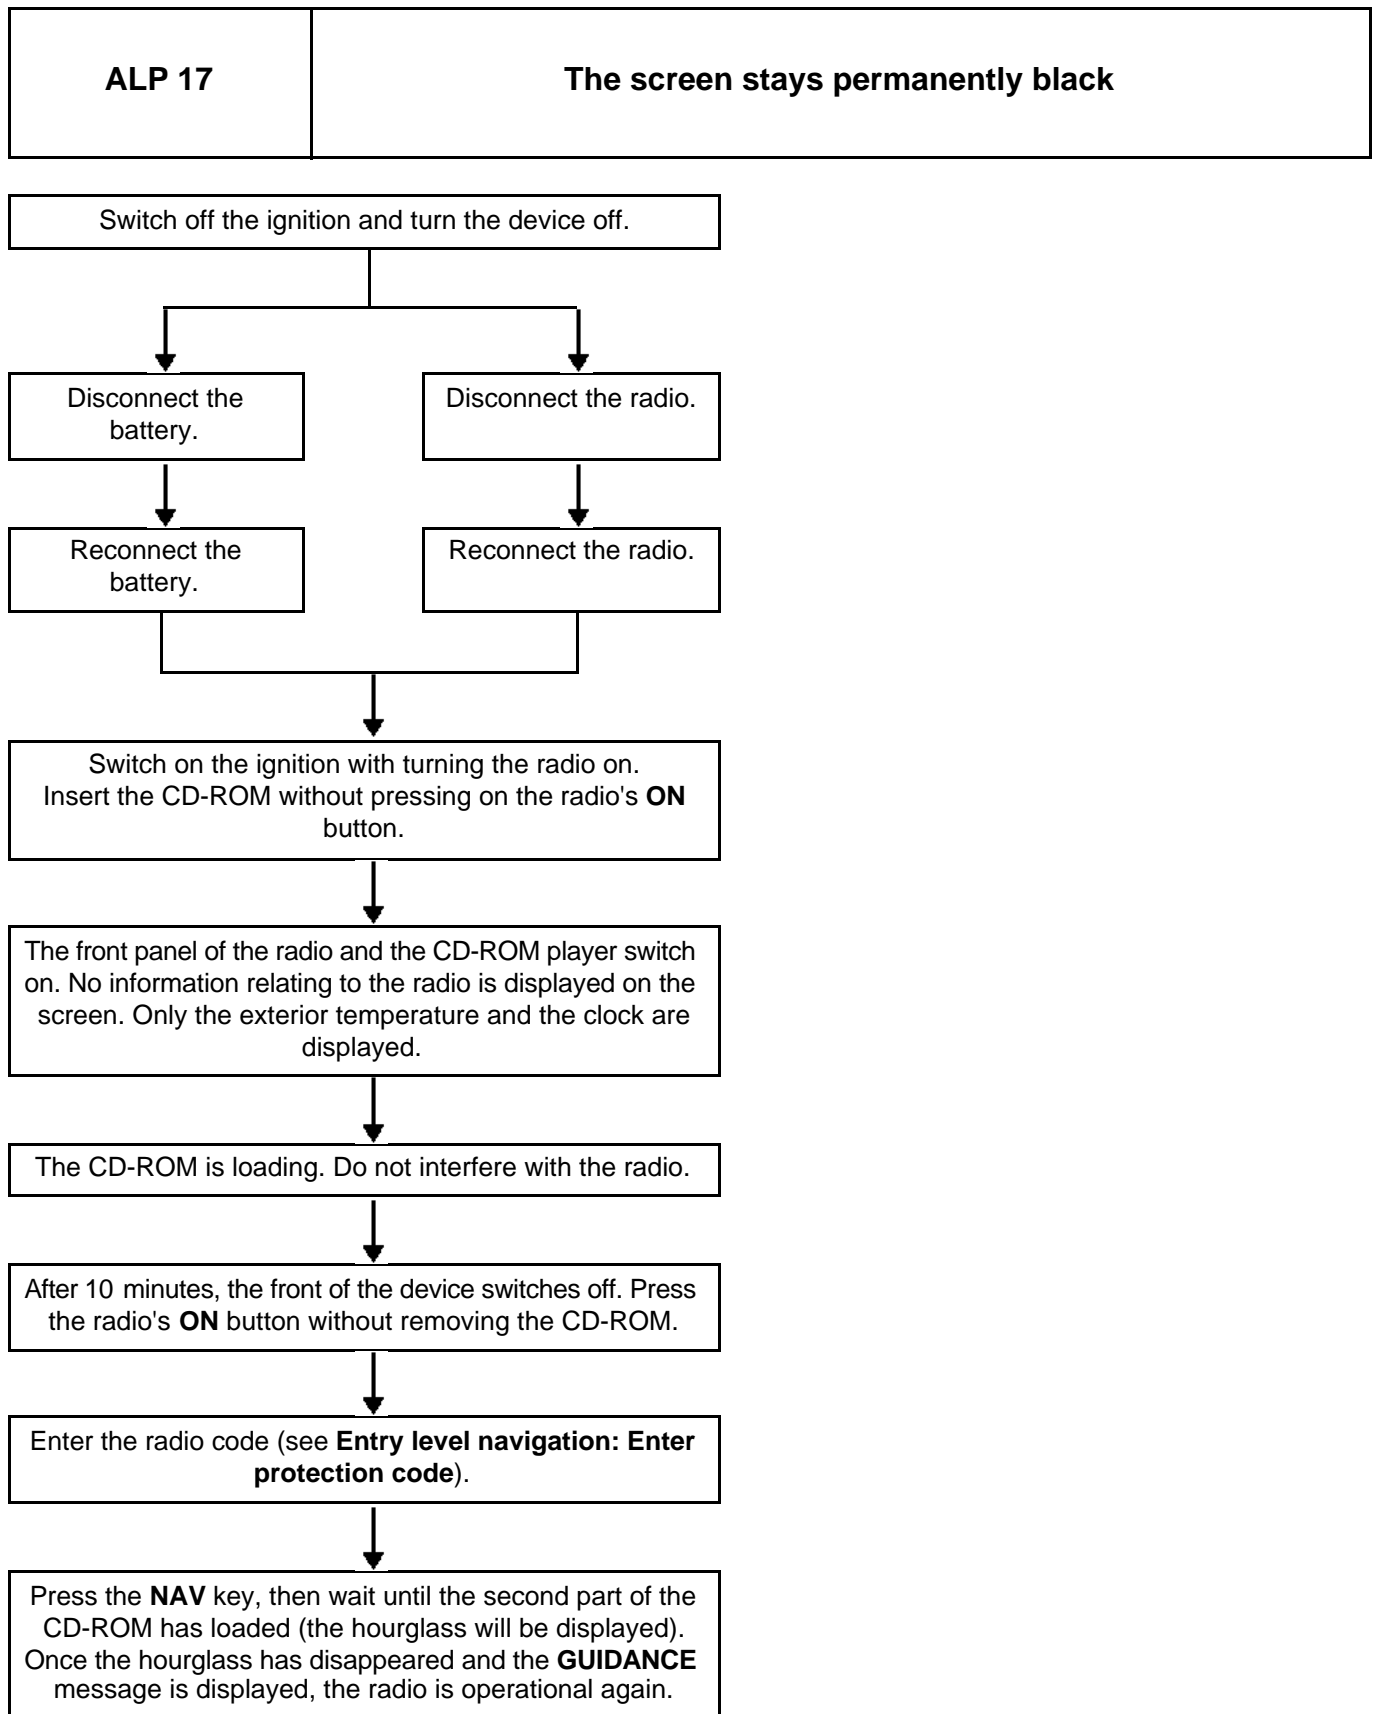

Entry level navigation system: Fault finding chart

ALP 16

Following a navigation CD ROM update, the system does not work.

Recovering a jammed CD

First solution

If the electrical ejector motor is operational, eject the CD ROM using a **4.5 V** battery to supply electric motor (**B**) (attach the + wire to contact (**1**) and the - wire to contact (**2**) when ejecting the CD ROM).

ON-BOARD TELEMATICS SYSTEM

Entry level navigation system: CD ROM

83C

Recovering a jammed CD

Second solution

If the electrical ejector motor is not operational, remove screw (C) and release electrical motor (B).

Turn toothed wheel (D) by hand in a clockwise direction until the CD ROM is ejected.

Before replacing the radio:

- refit the electric motor and attach it using the bolt (second solution only),
- close the unit again and reattach the upper section using the retaining bolt from the old models.
