FRONT PASSENGER AIR BAG DISABLEMENT KEY

- Engine: **XXX**
- Gearbox: **XXX**

Basic manuals:
Technical Notes **3428A - 3434A - 3435A**

Two types of equipment may be fitted on the cars depending on the date of their manufacture. Only the most recent generation parts are referenced in the spare parts:

- **1st type**
Disablement key: automatic return to the OFF position (air bag not activated)
Key disablement system resistance:
 - OFF position: 400 Ω
 - ON position: 100 Ω
- **2nd type**
Disablement key: automatic return to the ON position (air bag activated)
Key disablement system resistance:
 - OFF position: 400 Ω
 - ON position: 100 Ω

IMPORTANT: the computer must correspond to the correct version of the disablement key for the system to function correctly. If the car is fitted with equipment containing two components from different generations, the **air bag OFF** warning light will light up when the disablement key is turned to the ON position. If this occurs, check the disablement key system resistance:

- if the resistance is incorrect, replace the disablement key,
- if the resistance is correct, replace the computer.

"The repair methods given by the manufacturer in this document are based on the technical specifications current when it was prepared.

The methods may be modified as a result of changes introduced by the manufacturer in the production of the various component units and accessories from which his vehicles are constructed."
